Grades 4-8 *Maker Camp* Delanie Holton-Fessler, 2021-02-23 Classic and innovative hands-on projects for kids ages 3 and up designed to teach both heritage skills and how to think creatively. Handcraft is part of human nature; we build, we create, we innovate. The 20 projects in this book from an experienced art educator weave a story of human innovation and creativity from the very beginnings of building shelters in the woods to tinkering with recycled materials. Heritage skills teach children how to be independent and capable makers; fiber and wood projects offer rewarding crafts that also teach planning, preparation, and safe risk-taking; and tinkering activities connect the low-tech process of making and doing with innovation. From soap carving and knot-tying to building toy cars and junk robots, this book brings the fun of making things with your hands to young kids and links skills of the past with the present. The book also explores how to set up a maker space and teaches foundational workshop practices that can easily be applied to the home studio. Each project offers extensions for different ages and abilities and provides guiding questions to enrich the experience for both the maker, teacher, parent, and the apprentice child to encourage and celebrate creative practical play. **Science in Your World: Teacher edition** Jay K. Hackett, 1991 *Techno-Vernacular Creativity and Innovation* Nettrice R. Gaskins, 2021-08-10 A novel approach to STEAM learning that engages students from historically marginalized communities in culturally relevant and inclusive maker education. The growing maker movement in education has become an integral part of both STEM and STEAM learning, tapping into the natural DIY inclinations of creative people as well as the educational power of inventing or making things. And yet African American, Latino, American, and Indigenous people are underrepresented in maker culture and education. In this book, Nettrice Gaskins proposes a novel approach to STEAM learning that engages students from historically marginalized communities in culturally relevant and inclusive maker education. Techno vernacular creativity (TVC) connects technical literacy, equity, and culture, encompassing creative innovations produced by ethnic groups that are often overlooked. TVC uses three main modes of activity: reappropriation, remixing, and improvisation. Gaskins looks at each of the three modes in turn, guiding readers from research into practice. Drawing on real-world examples, she shows how TVC creates dynamic learning environments where underrepresented ethnic students feel that they belong. Students who remix computationally, for instance, have larger toolkits of computational skills with which to connect cultural practices to STEAM subjects. Reappropriation offers a way to navigate cultural repertoires; improvisation is firmly rooted in cultural and creative practices. Finally, Gaskins explores an equity-oriented approach that makes a distinction between conventional or dominant pedagogical approaches and culturally relevant or responsive making methods and practices. She describes TVC habits of mind and suggests methods of instruction and projects. **Harcourt Science: Physical science, [grade] 4, Units E and F, teacher's ed. [v. 18].
