Making Choices In Health Who Guide To Cost Effectiveness Analysis:

Making Choices in Health T. Tan-Torres Edejer, 2003 *Making Choices in Health* World Health Organization, 2003

The Guide in Part I begins with a brief description of generalized CEA and how it relates to the two questions raised above. It then considers issues relating to study design, estimating costs, assessing health effects, discounting, uncertainty, and sensitivity analysis, and reporting results. Detailed discussions of selected technical issues and applications are provided in a series of background papers originally published in journals but included in this book for easy reference in Part II from the back cover. *Making Choices in Health: WHO Guide to Cost-effectiveness Analysis* Rob M. Adam Baltussen (Taghreed), Several guidelines on cost effectiveness analysis CEA already exist. There are two reasons for producing another set. The first is that traditional or incremental CEA ignores the question of whether the current mix of interventions represents an efficient use of resources. Secondly, the resources required to evaluate the large number of interventions required to use CEA to identify opportunities to enhance efficiency are prohibitive. The approach of Generalized CEA proposed in this Guide seeks to provide analysts with a method of assessing whether the current as well as proposed mix of i

Applied Methods of Cost-effectiveness Analysis in Healthcare Alastair Gray, 2011 This book provides the reader with a comprehensive set of instructions and examples of how to perform an economic evaluation of a health intervention focusing solely on cost effectiveness analysis in healthcare. *Routledge Handbook of Water and Health* Jamie Bartram, 2015-09-25 This comprehensive handbook provides an authoritative source of information on global water and health suitable for interdisciplinary teaching for advanced undergraduate and postgraduate students. It covers both developing and developed country concerns. It is organized into sections covering hazards including disease, chemicals, and other contaminants; exposure; interventions; intervention implementation; distal influences; policies and their implementation; investigative tools; and historic cases. It offers 71 analytical and engaging chapters, each representing a session of teaching or graduate seminar. Written by a team of expert authors from around the world, many of whom are actively teaching the subject, the book provides a thorough and balanced overview of current knowledge, issues, and relevant debates, integrating information from the environmental health and social sciences. *Journal of the Medical Association of Thailand*, 2008-06 The journal of the Medical Association of Thailand publishes original and review articles, including case reports that relate to the study or research on diseases, epidemiology, drug, or vaccine that have the influence on clinical course, treatment, and prevention of human illness.

Evidence-based Decisions and Economics Ian Shemilt, Miranda Mugford, Luke Vale, Kevin Marsh, Cam Donaldson, 2011-09-22 The need for evidence-based decisions that take account of both effectiveness and economics is greater now than ever. Using case studies and illustrative examples throughout, the authors describe how the activities and outputs of evidence synthesis, systematic review, economic analysis, and decision making interact within and across different spheres of health and social policy and practice. Expanding on the first edition, the book now covers approaches to evidence

synthesis that combine economics and systematic review methods in the applied fields of social welfare education and criminal justice as well as health care. Written by economists and health services researchers closely involved in developing evidence based policy and practice it showcases current state of the art methodology and will be an invaluable read for all policy makers and practitioners using evidence to inform decisions. Analysts conducting research to support decisions and students discovering the need for evidence based decisions to incorporate economic perspectives and evidence.

Ethics and Governance of Biomedical Research Daniel Strech, Marcel Mertz, 2016-05-09 In this book scholars with different disciplinary and national backgrounds argue for possible answers and analyse case studies on current issues of governance in biomedical research. These issues comprise among others the research care distinction, risk evaluation in early human trials, handling of incidental findings, placebo effects, cluster randomized trials, publication bias or consent in biobank research. This book demonstrates how new technologies and research possibilities multiply or intensify already known governance challenges leaving room for ethical analysis and complex moral choices. Clinical researchers, research ethics committee members and research ethicists have all to deal with such challenges on a daily basis. While general reflection on core concepts of research ethics is seldom pointless, those confronted with hard moral choices do need more practical and contextualized reflection on the said issues. This book particularly provides such contextualized reflections and aims to inform all those who study, conduct, regulate, fund or participate in biomedical research.

Infant and Young Child Feeding Fiona Dykes, Victoria Hall-Moran, 2009-08-14 This exciting book edited by Fiona Dykes and Victoria Hall Moran and with a foreword from Gretel Pelto explores in an integrated context the varied factors associated with infant and child nutrition including global feeding strategies, cultural factors, issues influencing breastfeeding and economic and life cycle influences.

Program Evaluation and Performance Measurement James C. McDavid, Irene Huse, Laura R. L. Hawthorn, 2018-10-16 Program Evaluation and Performance Measurement offers a conceptual and practical introduction to program evaluation and performance measurement for public and non profit organizations. The authors cover the performance management cycle in organizations which includes strategic planning and resource allocation, program and policy design, implementation and management and the assessment and reporting of results. The Third Edition has been revised to highlight the current economic, political and socio-demographic context within which evaluators are expected to work and includes dynamic public policy exemplars such as the evaluation of body worn police cameras. Finally a text that successfully brings together quantitative and qualitative methods for program evaluation.

The Elgar Companion to Health Economics Andrew M. Jones, 2012 The Elgar Companion to Health Economics is a comprehensive and accessible look at the field as seen by its leading figures. Joseph Newhouse Harvard Medical School US Acclaim for the first edition. This Companion is a timely addition. It contains 50 chapters from 90 contributors around the world on the topical and policy relevant aspects of health economics. There is a balanced coverage of theoretical and empirical materials and

conceptual and practical issues I have found the Companion very useful Sukhan Jackson Economic Analysis and Policy This encyclopedic work provides interested readers with an authoritative and comprehensive overview of many if not all of the current research issues in health economics Highly recommended Upper level undergraduates and above R M Mullner Choice This comprehensive collection brings together more than 50 contributions from some of the most influential researchers in health economics It authoritatively covers theoretical and empirical issues in health economics with a balanced range of material on equity and efficiency in health care systems health technology assessment and issues of concern for developing countries This thoroughly revised second edition is expanded to include four new chapters while all existing chapters have been extensively updated The Elgar Companion to Health Economics Second Edition intends to take an audience of advanced undergraduates postgraduates and researchers to the current frontier of research by providing concise and readable introductions to key topics

Simulating the impact of malaria control interventions Fabrizio Tediosi, 2011-12-05T00:00:00+01:00 Malaria is one of the major public health problems for low income countries a major global health priority and it has also a dramatic economic impact Standard tools traditionally used to assess the public health and economic impact of malaria control interventions such as efficacy trials and static cost effectiveness analyses capture only short term effects They fail to take into account long term and dynamic effects due to the complex dynamic of malaria and to the interactions between intervention effectiveness and health systems This study aimed at developing integrated mathematical models for predicting the epidemiologic and economic effects of malaria control interventions The study combines innovative mathematical models of malaria epidemiology with innovative modeling of the health system and of the costs and effects of malaria control interventions These approaches are applied to simulate the epidemiological impact and the cost effectiveness of hypothetical malaria vaccines Combining advanced stochastic simulation modeling of malaria epidemiology with health system dynamic modeling is a crucial innovation proposed by the approaches presented in this thesis

Global Bioethics Ronald M. Green, Aine Donovan, Steven A. Jauss, 2008-11-06 Medical care and biomedical research are rapidly becoming global Ethical questions that once arose only in the narrow context of the physician patient relationship in relatively prosperous societies are now being raised across societies cultures and continents For example what should be the standard of care for clinical trials of medical innovations in poorer countries Are researchers obligated to compare new therapies or drugs with the best known ones available or can they use as a benchmark the actual treatments or lack of treatments available to poor people Should pharmaceutical companies seeking to lower the costs of new drug trials be allowed to enrol citizens of less developed countries in them even when those individuals cannot afford and will not be eligible for the resulting drugs More generally should the norms of medicine and research be the same across cultures or can they adapt to local social economic or religious conditions *Global Bioethics* gathers some of the world's leading bioethicists to explore many of the new questions raised by the globalization of medical care and biomedical research Among the topics

covered are the impact of globalization on the norms of medical ethics the conduct of international research the ethics of international collaborations challenges to medical professionalism in the international setting and the relation of religion to global bioethics

Methods for the Economic Evaluation of Health Care Programmes M. F. Drummond,2005 This highly successful textbook is now available in its third edition Over the years it has become the standard textbook in the field world wide It mirrors the huge expansion of the field of economic evaluation in health care since the last edition was published in 1997

This new edition builds on the strengths of previous editions being clearly written in a style accessible to a wide readership. Key methodological principles are outlined using a critical appraisal checklist that can be applied to any published study. The methodological features of the basic forms of analysis are then explained in more detail with special emphasis of the latest views on productivity costs, the characterisation of uncertainty and the concept of net benefit. The book has been greatly revised and expanded especially concerning analysing patient level data and decision analytic modelling. There is discussion of new methodological approaches including cost effectiveness acceptability curves, net benefit regression, probabilistic sensitivity analysis and value of information analysis. There is an expanded chapter on the use of economic evaluation including discussion of the use of cost effectiveness thresholds, equity considerations and the transferability of economic data. This new edition is required reading for anyone commissioning, undertaking or using economic evaluations in health care and will be popular with health service professionals, health economists, pharmacists and health care decision makers. It is especially relevant for those taking pharmacoeconomics courses.
