Brandon,R.L. Hohlfelder,M.D. Jackson,J.P. Oleson,2014-08-29 One marker of the majesty of ancient Rome is its surviving architectural legacy the stunning remains of which are scattered

throughout the circum Mediterranean landscape Surprisingly one truly remarkable aspect of this heritage remains relatively unknown There exists beneath the waters of the Mediterranean the physical remnants of a vast maritime infrastructure that sustained and connected the western world s first global empire and economy The key to this incredible accomplishment and to the survival of structures in the hostile environment of the sea for two thousand years was maritime concrete a building material invented and then employed by Roman builders on a grand scale to construct harbor installations anywhere they were needed rather than only in locations with advantageous geography or topography This book explains how the Romans built so successfully in the sea with their new invention The story is a stimulating mix of archaeological geological historical and chemical research with relevance to both ancient and modern technology It also breaks new ground in bridging the gap between science and the humanities by integrating analytical materials science history and archaeology along with underwater exploration The book will be of interest to anyone interested in Roman architecture and engineering and it will hold special interest for geologists and mineralogists studying the material characteristics of pyroclastic volcanic rocks and their alteration in seawater brines The demonstrable durability and longevity of Roman maritime concrete structures may be of special interest to engineers working on cementing materials appropriate for the long term storage of hazardous substances such as radioactive waste A pioneering methodology was used to bore into maritime structures both on land and in the sea to collect concrete cores for testing in the research laboratories of the CTG Italcementi Group a leading cement producer in Italy the University of Berkeley and elsewhere The resulting mechanical chemical and physical analysis of 36 concrete samples taken from 11 sites in Italy and the eastern Mediterranean have helped fill many gaps in our knowledge of how the Romans built in the sea To gain even more knowledge of the ancient maritime technology the directors of the Roman Maritime Concrete Study ROMACONS engaged in an ambitious and unique experimental archaeological project the construction underwater of a reproduction of a Roman concrete pier or pila The same raw materials and tools available to the ancient builders were employed to produce a reproduction concrete structure that appears to be remarkably similar to the ancient one studied during ROMACON s fieldwork between 2002 2009 This volume reveals a remarkable and unique archaeological project that highlights the synergy that now exists between the humanities and science in our continuing efforts to understand the past It will quickly become a standard research tool for all interested in Roman building both in the sea and on land and in the history and chemistry of marine concrete The authors also hope that the data and observations it presents will stimulate further research by scholars and students into related topics since we have so much more to learn in the years ahead

Gortina IX.1-2. Il teatro di Pithion. Scavi e ricerche 2001-2013 Bonetto Jacopo, Francisci Denis, Mazzocchin Stefania, 2019-12-27 Quest opera costituisce l'edizione sistematica degli scavi e delle ricerche condotti tra il 2001 e il 2013 presso il Teatro del Pythion di Gortina di Creta dalla Scuola archeologica italiana di Atene e dall'Università degli Studi di Padova con la preziosa collaborazione della 23 Eforia per le antichità preistoriche classiche e bizantine di Iraklio. Il lavoro di cui qui si presentano gli esiti ebbe origine nel clima di profondo rinnovamento che caratterizzò la vita scientifica della secolare istituzione italiana in Grecia allorché E. Greco ne assunse la direzione nel 2000. Tutto lo scavo è stato realizzato scendendo dai livelli superficiali verso la massima profondità per comprendere l'intera sequenza stratigrafica ed evolutiva di questa zona della città. La strategia si rivelò utile per ricostruire la storia dell'edificio dalla sua costruzione fino all'abbandono dell'area. Ma non ha potuto fornire risultati su un'altra questione cruciale relativa alle realtà preesistenti infatti a causa delle masse strutturali dell'edificio per spettacoli i saggi di scavo non hanno potuto mettere in luce con sufficiente ampiezza i livelli di frequentazione antecedenti al II sec. d. C. e dare indicazioni sull'eventuale presenza di altri edifici teatrali di altra natura nel sedime del Teatro di età imperiale. Proprio attraverso queste lunghe riflessioni si è così arrivati all'idea di proporre l'esito della ricerca attraverso una presentazione estesamente analitica del lavoro svolto e dei dati acquisiti. Nei due tomi quindi è esposta l'interesse delle evidenze stratigrafiche attraverso la loro narrazione testuale e la presentazione grafica.

tomo I parte II capp 1 10 ed dato riferimento esauriente di tutti i reperti mobili sia attraverso il loro assemblaggio per contesti di giacitura sia attraverso la loro classificazione tipologica tomo II parte III Pur essendo il lavoro articolato in ampie parti di sintesi e di interpretazione storica dei dati tomo I parte II cap 11 si cos mantenuto fede alla logica della presentazione integrale dei dati che riteniamo sia la sola che possa permettere a tutti gli studiosi interessati alle nostre ricerche non solo di giudicare le letture storiche conclusive forse caduche e opinabili ma anche di riprendere in esame le stesse basi di conoscenza per proporre o sostenere considerazioni storiche diverse da quelle avanzate
