**Histories of the Future** Alan Sandison, 2016-04-30 This collection of interdisciplinary essays examines some of the ways in which writers artists film makers strategists and political thinkers have imagined the future over the last two centuries Although a number of contributions discuss mainstream science fiction the collection s emphasis is not on any single genre but rather on the ways in which different histories technological cultural military ideological generate and inform different modes of speculation about things to come These histories also disclose that our patterns of expectation are much influenced by our relationship to the past Histories of the Future A. Sandison, 2000-11-10 This collection of interdisciplinary essays

examines some of the ways in which writers artists film makers strategists and political thinkers have imagined the future over the last two centuries Although a number of contributions discuss mainstream science fiction the collection s emphasis is not on any single genre but rather on the ways in which different histories technological cultural military ideological generate and inform different modes of speculation about things to come These histories also disclose that our patterns of expectation are much influenced by our relationship to the past *Historicism and the Human Sciences in Victorian Britain* Mark Bevir, 2017-03-10 Historicism and the Human Sciences in Victorian Britain explores the rise and nature of historicist thinking about such varied topics as life race character literature language economics empire and law The contributors show that the Victorians typically understood life and society as developing historically in a way that made history central to their intellectual inquiries and their public culture Although their historicist ideas drew on some Enlightenment themes they drew at least as much on organic ideas and metaphors in ways that lent them a developmental character This developmental historicism flourished alongside evolutionary motifs and romantic ideas of the self The human sciences were approached through narratives and often narratives of reason and progress Life individuals society government and literature all unfolded gradually in accord with underlying principles such as those of rationality nationhood and liberty This book will appeal to those interested in Victorian Britain historiography and intellectual history *Postapocalyptic Fantasies in*

*Antebellum American Literature* John Hay, 2017-10-05 Even before the Civil War American writers were imagining life after a massive global catastrophe For many the blank slate of the American continent was instead a wreckage strewn wasteland a new world in ruins Bringing together epic and lyric poems fictional tales travel narratives and scientific texts *Postapocalyptic Fantasies in Antebellum American Literature* reveals that US authors who enthusiastically celebrated the myths of primeval wilderness and virgin land also frequently resorted to speculations about the annihilation of civilizations past and future By examining such postapocalyptic fantasies this study recovers an antebellum rhetoric untethered to claims for historical exceptionalism a patriotic rhetoric that celebrates America while denying the United States a unique position outside of world history As the scientific field of natural history produced new theories regarding biological extinction geological transformation and environmental collapse American writers responded with wild visions of the ancient past and the distant

future     *Victorian Time* T. Ferguson, 2013-01-17 Victorian Time examines how literature of the era registers the psychological impact of the onset of a modern industrialized experience of time as time saving technologies such as steam powered machinery aimed at making economic life more efficient signalling the dawn of a new age of accelerated time

**London's Burning** Antony Taylor, 2012-02-02 Provides a reading of the popular fiction of London historicized in its political and cultural contexts     *The Epitome of Evil* M. Butter, 2009-04-27 This study explores the literary representations of Adolf Hitler in American fiction and makes the case that his figure has slowly developed from a means of left wing critique into a device of right wing affirmation     *Comic empires* Richard Scully, Andrekos Varnava, 2019-11-04 Comic empires is an innovative collection of new scholarly research exploring the relationship between imperialism and cartoons caricature and comic art     Worlding the south Sarah Comyn, Porscha Fermanis, 2021-07-06 This electronic version has been made available under a Creative Commons BY NC ND open access license This collection brings together for the first time literary studies of British colonies in nineteenth century Australia New Zealand South Africa South America Southeast Asia and the South Pacific Islands Drawing on hemispheric studies Indigenous studies and southern theory to decentre British and other European metropolises the collection offers a groundbreaking challenge to national paradigms and traditional literary periodisations and canons by prioritising southern cultural networks in multiple regional centres from Cape Town to Dunedin Worlding the south examines the dialectics of literary worldedness in ways that recognise inequalities of power textual and material violence and literary and cultural resistance The collection revises current literary histories of the British world by arguing for the distinctiveness of settler colonialism in the southern hemisphere and by incorporating Indigenous diasporic and south south perspectives     *Hard Reading* T. A. Shippey, 2016 An exploration of politics and the role of the soft sciences in Science Fiction     **Victorian Science and Imagery** Nancy Rose Marshall, 2021-07-27 The nineteenth century was a period of science and imagery when scientific theories and discoveries challenged longstanding boundaries between animal plant and human and when art and visual culture produced new notions about the place of the human in the natural world Just as scientists relied on graphic representation to conceptualize their ideas artists moved seamlessly between scientific debate and creative expression to support or contradict popular scientific theories such as Darwin's theory of evolution and sexual selection deliberately drawing on concepts in ways that allowed them to refute popular claims or disrupt conventional knowledges Focusing on the close kinship between the arts and sciences during the Victorian period the art historians contributing to this volume reveal the unique ways in which nineteenth century British and American visual culture participated in making science and in which science informed art at a crucial moment in the history of the development of the modern world Together they explore topics in geology meteorology medicine anatomy evolution and zoology as well as a range of media from photography to oil painting They remind us that science and art are not tightly compartmentalized separate influences Rather these are fields that share forms manifest as waves layers lines or geometries that invest in the

idea of the evolution of form and that generate surprisingly kindred responses such as pain pleasure empathy and sympathy

Dreamworlds of Race Duncan Bell, 2020-12-08 How transatlantic thinkers in the late nineteenth and early twentieth centuries promoted the unification of Britain and the United States Between the late nineteenth century and the First World War an ocean spanning network of prominent individuals advocated the unification of Britain and the United States They dreamt of the final consolidation of the Angloworld Scholars journalists politicians businessmen and science fiction writers invested the Anglo Saxons with extraordinary power The most ambitious hailed them as a people destined to bring peace and justice to the earth More modest visions still imagined them as likely to shape the twentieth century *Dreamworlds of Race* explores this remarkable moment in the intellectual history of racial domination political utopianism and world order Focusing on a quartet of extraordinary figures Andrew Carnegie W T Stead Cecil J Rhodes and H G Wells Duncan Bell shows how unionists on both sides of the Atlantic reimaged citizenship empire patriotism race war and peace in their quest to secure global supremacy Yet even as they dreamt of an Anglo dominated world the unionists disagreed over the meaning of race the legitimacy of imperialism the nature of political belonging and the ultimate form and purpose of unification The racial dreamworld was an object of competing claims and fantasies Exploring speculative fiction as well as more conventional forms of political writing Bell reads unionist arguments as expressions of the utopianism circulating through fin de siècle Anglo American culture and juxtaposes them with pan Africanist critiques of racial domination and late twentieth century fictional narratives of Anglo American empire Tracing how intellectual elites promoted an ambitious project of political and racial unification between Britain and the United States *Dreamworlds of Race* analyzes ideas of empire and world order that reverberate to this day

Reordering the World Duncan Bell, 2019-10-22 A magisterial study by a historian at the top of his game Political theorists intellectual historians and students of empire are once again in Duncan Bell's debt for his deep research elegant analysis and consistently acute judgments David Armitage Harvard University

*Science Fact and Science Fiction* Brian Stableford, 2006-09-06 Science fiction is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings *Science Fact and Science Fiction* examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction

including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed      *Essays on Ayn Rand's Anthem* Robert Mayhew,2005-01-01 The essays in this collection treat historical literary and philosophical topics related to Ayn Rand s Anthem an anti utopia fantasy set in the future The first book length study on Anthem this collection covers subjects such as free will political freedom and the connection between freedom and individual thought and privacy      **Nineteenth-Century British Literature Then and Now** Simon Dentith,2016-05-06 Envisioning today s readers as poised between an impossible attempt to read texts as their original readers experienced them and an awareness of our own temporal moment Simon Dentith complicates traditional prejudices against hindsight to approach issues of interpretation and historicity in nineteenth century literature Suggesting that the characteristic aesthetic attitude encouraged by the backward look is one of irony rather than remorse or regret he examines works by Charles Dickens George Eliot Anthony Trollope William Morris and John Ruskin in terms of their participation in significant histories that extend to this day Liberalism class gender political representation and notions of progress utopianism and ecological concern as currently understood can be traced back to the nineteenth century Just as today s critics strive to respect the authenticity of nineteenth century writers and readers who responded to these ideas within their historical world so too do those nineteenth century imaginings persist to challenge the assumptions of the present It is therefore possible Dentith argues to conceive of the act of reading historical literature with an awareness of the historical context and of the difference between the past and the present while allowing that friction or difference to be part of how we think about a text and how it communicates His book summons us to consider how words travel to the reality of the reader s own time and how engagement with nineteenth century writers anticipation of the judgements of future generations reveal hindsight s capacity to transform our understanding of the past in the light of subsequent knowledge      **Sites of Exchange** Maurizio Ascari,Adriana Corrado,2006 Crossing borders both physically and imaginatively is part of our nomadic postmodern identity but transcultural and transnational exchanges have also played a major role in the centuries long processes of hybridisation that helped to fashion the vast geographic political and imaginative container of diversity we call Europe This volume gathers together the work of scholars from several European countries in an attempt to encourage a collective reflection upon historical and often mythical locations and landscapes as well as upon the thresholds and faultlines that unite or separate them The issues the volume tackles are delicate and complex for the encounter of differences engenders both curiosity and suspicion and there is no easy way to create a new synthesis while respecting and promoting diversity However since Europe is inevitably a cultural and political entity in the making Europeans should embrace the great narrative of a utopian project uniting their efforts to work towards a civilisation that is grounded on plurality and openness      The Christian Invention of Time Simon Goldhill,2022-02-03 Time is integral to human culture Over the last two centuries people s relationship with time has been transformed through industrialisation trade and technology But the first such life changing

transformation under Christianity's influence happened in late antiquity. It was then that time began to be conceptualised in new ways with discussion of eternity, life after death and the end of days. Individuals also began to experience time differently from the seven day week to the order of daily prayer and the festal calendar of Christmas and Easter. With trademark flair and versatility, world renowned classicist Simon Goldhill uncovers this change in thinking. He explores how it took shape in the literary writing of late antiquity and how it resonates even today. His bold new cultural history will appeal to scholars and students of classics, cultural history, literary studies and early Christianity alike.

*Science Fiction and the Prediction of the Future* Gary Westfahl, Wong Kin Yuen, 2014-01-10. Science fiction has always challenged readers with depictions of the future. Can the genre actually provide glimpses of the world of tomorrow? This collection of fifteen international and interdisciplinary essays examines the genre's predictions and breaks new ground by considering the prophetic functions of science fiction films as well as SF literature. Among the texts and topics examined are classic stories by Murray Leinster, C. L. Moore and Cordwainer Smith, 2001: A Space Odyssey and its sequels, Japanese anime and Hong Kong cinema and electronic fiction.

Imagining Future War Antulio J. Echevarria II, 2007-04-30. Rapid and momentous technological changes at the turn of the 20th century forced military professionals and educated civilians to envision the future of war and warfare, especially during an age where nations found themselves aggressively competing for dominance on the world stage. Antulio J. Echevarria II offers a comparative study of these predictions to assess who got it right and why. He concludes that professionals were particularly adept at predicting the warfare of the immediate future by framing their discussions in terms of solving tactical problems, but they were much less successful at thinking of the long term. Unburdened by the necessity of strategic problem solving, educated amateurs were allowed more flexibility to imagine the long term future of warfare and at times proved to be remarkably accurate. Echevarria organizes his study by comparing visions of future wars on land, at sea, undersea and in air. In each instance, professionals and amateurs had their own distinctive imaginings. Among the notable speculators included in this book are science fiction author H. G. Wells and military theorist Ivan Bloch. This approach to the study of warfare is one of those rare examples of a book that can appeal to and inform a wide cross section of readers.
