Key Ideas In Teaching Mathematics Research Based Guidance For Ages 9 19:

Key Ideas in Teaching Mathematics Anne Watson, Keith Jones, Dave Pratt, 2013-02-21 Big ideas in the mathematics curriculum for older school students especially those that are hard to learn and hard to teach are covered in this book It will be a first port of call for research about teaching big ideas for students from 9 19 and also has implications for a wider range of students These are the ideas that really matter that students get stuck on and that can be obstacles to future learning It shows how students learn why they sometimes get things wrong and the strengths and pitfalls of various teaching approaches Contemporary high profile topics like modelling are included The authors are experienced teachers researchers and mathematics educators and many teachers and researchers have been involved in the thinking behind this book funded by the Nuffield Foundation An associated website hosted by the Nuffield Foundation summarises the key messages in the book and connects them to examples of classroom tasks that address important learning issues about particular mathematical ideas

Key Ideas in Teaching Mathematics Anne Watson, Keith Jones, Dave Pratt, 2013-02-21 International research is used to inform teachers and others about how students learn key ideas in higher school mathematics what the common problems are and the strengths and pitfalls of different teaching approaches An associated website hosted by the Nuffield Foundation gives summaries of main ideas and access to sample classroom tasks

Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford John Mason Maria Blanton Deborah Schifter and Max Stephens as well as younger scholars from Asia Europe South Africa the Americas Australia and New Zealand present novel theoretical perspectives and their latest findings The book is divided into three parts that focus on i epistemological mathematical aspects of algebraic thinking ii learning and iii teaching and teacher development Some of the main threads running through the book are the various ways in which structures can express themselves in children s developing algebraic thinking the roles of generalization and natural language and the emergence of symbolism Presenting vital new data from international contexts the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades

Presenting Children to Maths: Stronger Character for Better Learning David Shattock, 2023-09-22 Mathematics is not a universally popular subject neither within nor outside of school There are those who love it but many do not and it is not uncommon for people to take a perverse pride in being bad at it This book argues that while much needed improvements to mathematics teaching are necessary to address such issues they are insufficient without also imbuing children with the character required to learn it effectively Teachers of mathematics are

responsible not only for applying skilful pedagogy but also for developing a productive learning culture within the mathematics classroom We need to consider the emotional and social impact on children of teachers own attitudes and beliefs about mathematics and how children should be taught it Sometimes provocative and irreverent but always stimulating and lucid Presenting Children to Maths is an original and profound discussion about how students ability and success in mathematics depends largely on how their disposition and will are shaped towards learning it

The Second Handbook of Research on the Psychology of Mathematics Education Ángel Gutiérrez, Gilah C. Leder, Paolo Boero, 2016-07-23 Since its establishment in 1976 PME The International Group for the Psychology of Mathematics Education is serving as a much sought after venue for scientific debate among those at the cutting edge of the field as well as an engine for the development of research in mathematics education A wide range of research activities conducted over the last ten years by PME members and their colleagues are documented and critically reviewed in this handbook released to celebrate the Group s 40 year anniversary milestone The book is divided into four main sections Cognitive aspects of learning and teaching content areas Cognitive aspects of learning and teaching transverse areas Social aspects of learning and teaching mathematics and Professional aspects of teaching mathematics The selection for each chapter of a team of at least two authors mostly located in different parts of the world ensured effective coverage of each field High quality was further enhanced by the scrupulous review of early chapter drafts by two leaders in the relevant field The resulting volume with its compilation of the most relevant aspects of research in the field and its emphasis on trends and future developments will be a rich and welcome resource for both mature and emerging researchers in mathematics education
