

Sustainably cooling buildings is about prioritising and combining all practices that reduce energy needs in city, building, individual and technological level, while also considering the local context and future climate change.

There is no one-size-fits-all solution and incorporating equitable access to cooling for the most vulnerable is part of the strategy. This visual offers non-exhaustive examples of options that can be combined and adopted.

**3 Individual awareness, behaviour and good practices: non-exhaustive examples**

- Opening windows at night and close blinds during the day
- Use of active cooling systems only if needed
- Reduction use of AC: e.g. set thermostat to 22°C

**4 Innovation to be considered**

- Targeting of tailored communications and awareness raising to the most vulnerable
- Creating digitally enabled tools help people look after each other
- Developing low energy efficient cooling technology for extreme temperatures
