These data indicate that the 1990s have been a decade of rapid growth in the number of people in the United States who are in the labor force. The number of people in the labor force has increased by 10 million people since 1980. This increase in the labor force has been driven by a number of factors, including a decline in the unemployment rate, an increase in the number of people working part-time, and an increase in the number of people working in the service sector.

For the purpose of this study, the following question was asked: "How many children in the sample showed a trend in performance in mathematics that could be interpreted as a change in performance over time?"
