

HALO EFFECT

The halo effect is a cognitive bias where our overall impression of a person or thing is influenced by a single positive trait or characteristic.

DEFINITION

The halo effect occurs when we generalize positive qualities to other aspects, even if there is no direct evidence to support it. For example, if someone is good at football, we might assume they're good at poetry as well. This bias can affect our judgments and evaluations, leading to skewed perceptions and unfair assessments.

EXAMPLE

Beauty Bias: Imagine you meet someone who is physically attractive, and based on their looks alone, you assume they must also be intelligent and kind. As a result, you tend to overlook any flaws or negative traits they may possess and view them in an overly positive light.
