Finite Fields and Applications Dieter Jungnickel, H. Niederreiter, 2001-03-20 This volume represents the refereed proceedings of the Fifth International Conference on Finite Fields and Applications Fq5 held at the University of Augsburg Germany from August 2 6 1999 and hosted by the Department of Mathematics The conference continued a series of biennial international conferences on finite fields following earlier conferences at the University of Nevada at Las Vegas USA in August 1991 and August 1993 the University of Glasgow Scotland in July 1995 and the University of Waterloo Canada in August 1997 The Organizing Committee of Fq5 comprised Thomas Beth University of Karlsruhe Stephen D Cohen University of Glasgow Dieter Jungnickel University of Augsburg Chairman Alfred Menezes University of Waterloo Gary L Mullen Pennsylvania State University Ronald C Mullin University of Waterloo Harald Niederreiter Austrian Academy of Sciences and Alexander Pott University of Magdeburg The program of the conference consisted of four full days and one half day of sessions with 11 invited plenary talks and over 80 contributed talks that required three parallel sessions This documents the steadily increasing interest in finite fields and their applications Finite fields have an inherently fascinating structure and they are important tools in discrete mathematics Their applications range from combinatorial design theory finite geometries and algebraic geometry to coding theory cryptology and scientific computing A particularly fruitful aspect is the interplay between theory and applications which has led to many new perspectives in research on finite fields

Wallis, John C. George, 2016-12-12 What Is Combinatorics Anyway Broadly speaking combinatorics is the branch of mathematics dealing with different ways of selecting objects from a set or arranging objects It tries to answer two major kinds of questions namely counting questions how many ways can a selection or arrangement be chosen with a particular set of properties and structural questions does there exist a selection or arrangement of objects with a particular set of properties The authors have presented a text for students at all levels of preparation For some this will be the first course where the students see several real proofs Others will have a good background in linear algebra will have completed the calculus stream and will have started abstract algebra The text starts by briefly discussing several examples of typical combinatorial problems to give the reader a better idea of what the subject covers The next chapters explore enumerative ideas and also probability It then moves on to enumerative functions and the relations between them and generating functions and recurrences Important families of functions or numbers and then theorems are presented Brief introductions to computer algebra and group theory come next Structures of particular interest in combinatorics posets graphs codes Latin squares and experimental designs follow The authors conclude with further discussion of the interaction between linear algebra and combinatorics Features Two new chapters on probability and posets
