Handbook Of Forest Resource Economics:

Handbook of Forest Resource Economics Shashi Kant, Janaki Alavalapati, 2014-04-03 It is increasingly recognized that the economic value of forests is not merely the production of timber. Forests provide other key ecosystem services such as being sinks for greenhouse gases, hotspots of biodiversity, tourism and recreation. They are also vitally important in preventing soil erosion and controlling water supplies as well as providing non timber forest products and supporting the livelihoods of many local people. This handbook provides a detailed comprehensive and broad coverage of forest economics including traditional forest economics of timber production, economics of environmental role of forests and recent developments in forest economics. The chapters are grouped into six parts: fundamental topics in forest resource economics, economics of forest ecosystems, economics of forests, climate change and bioenergy, economics of risk, uncertainty and natural disturbances, economics of forest property rights and certification, and emerging issues and developments. Written by leading environmental forest and natural resource economists, the book represents a definitive reference volume for students of economics, environment, forestry and natural resource economics and management.

Forest Resource Economics And Policy Research Paul V. Ellefson, 2019-04-12 This book reviews the status of discipline wide activity in forest economics and policy research, especially investment levels, past and current program emphasis, program planning and organizational involvement. It defines strategic directions for forest economics and policy research.

Forest Resource Economics and Finance W. David Klemperer, Steven Bullard, Stephen C. Grado, Marcus K. Measells, Thomas J. Straka, 2021-09 Forest Resource Economics and Finance is intended for undergraduate forestry students but practicing foresters and policy analysts will also find it a useful reference. The text emphasizes economics as a way of thinking in which we compare added costs and benefits of actions in order to maximize net benefits. With the basics of capital theory, readers learn how to evaluate forestry investments in a way that embraces important environmental factors. Another key feature is a focus on analyzing current conflicts and tradeoffs that will continue to be prominent forestry issues in the 21st century: free market policies versus different levels of government intervention, economic development versus environmental conservation, private property rights versus public amenity rights, and timber versus non timber outputs. This text also addresses additional topics not often found in other forest economic books, including economics of non clearcutting management systems, economics of forest damage, risk analysis, inflation, environmental economics, capital budgeting and regional economics. Add to this a micro economics review, multiple use and non market good analysis, optimal capital management, benefit cost analysis, timber supply and demand, issues appraisal and valuation, forest industry economics and world forestry issues, and you have the most comprehensive forest economics text on the market. In addition to new and updated figures throughout the text, this newly revised second edition provides an overview of important trends in the modern timber industry, including advancements in engineered wood, international trade, global environmental issues as well as community forestry and agroforestry.

Forestry Economics John E. Wagner, 2011-07-26 Forestry Economics introduces students and practitioners to all aspects of the management and economics of forestry The book adopts the approach of managerial economics textbooks and applies this to the unique processes and problems faced by managers of forests While most forestry economics books are written by economists for future economists what many future forest and natural resource

managers need is to understand what economic information is and how to use it to make better business and management decisions John E Wagner draws on his twenty years of experience teaching and working in the field of forest resource economics to present students with an accessible understanding of the unique production processes and problems faced by forest and other natural resource managers There are three unique features of this book The first is its organization The material is organized around two common economic models used in forest and natural resources management decision making The second is the use of case studies from various disciplines Outdoor and Commercial Recreation Wood Products Engineering Forest Products and Forestry The purpose of these case studies is to provide students with applications of the concepts being discussed within the text The third is revisiting the question of how to use economic information to make better business decisions at the end of each chapter This ties each chapter to the preceding ones and reinforces the hypothesis that a solid working knowledge of these economic models and the information they contain are necessary for making better business decisions This textbook is an invaluable source of clear and accessible information on forestry economics and management for not only economics students but for students of other disciplines and those already working in forestry and natural resources
