[Handbook of International Economics](#) P.B. Kenen, R.W. Jones, 1988-04-15 This Handbook adopts a traditional definition of the subject and focuses primarily on the explanation of international transactions in goods services and assets and on the main domestic effects of those transactions The first volume deals with the real side of international economics It is concerned with the explanation of trade and factor flows with their main effects on goods and factor prices on the allocation of resources and income distribution and on

economic welfare and also with the effects on national policies designed explicitly to influence trade and factor flows. In other words it deals chiefly with microeconomic issues and methods. The second volume deals with the monetary side of the subject. It is concerned with the balance of payments adjustment process under fixed exchange rates with exchange rate determination under flexible exchange rates and with the domestic ramifications of these phenomena. Accordingly it deals mainly with macroeconomic issues although microeconomic methods are frequently utilized especially in work on expectations asset markets and exchange rate behavior. Comparative Advantage in International Trade Andrea Maneschi, 1998-01-01 Historians of international trade and trade theory intellectual historians and students of trade theory will all benefit from Andrea Maneschi's masterful work which takes the reader through a considerable amount of the primary literature and presents technical models of international trade with great clarity.

Sandra Peart *The International History Review* *The Economic Theory of Product Differentiation* John Beath, Yannis Katsoulacos, 1991-02-22 There are few industries in modern market economies that do not manufacture differentiated products. This book provides a systematic explanation and analysis of the widespread prevalence of this important category of products. The authors concentrate on models in which product selection is endogenous. In the first four chapters they consider models that try to predict the level of product differentiation that would emerge in situations of market equilibrium. These market equilibria with differentiated products are characterised and then compared with social welfare optima. Particular attention is paid to the distinction between horizontal and vertical differentiation as well as to the related issues of product quality and durability. This book brings together the most important theoretical contributions to these topics in a succinct and coherent manner. One of its major strengths is the way in which it carefully sets out the basic intuition behind the formal results. It will be useful to advanced undergraduate and graduate students taking courses in industrial economics and microeconomic theory.
