I can't recommend it enough."—Chris Hayes On Thursday, July 13, 1995, Chicagoans awoke to a blistering day in which the temperature would reach 106 degrees. The heat index, which measures how the temperature actually feels on the body, would hit 126 degrees by the time the day was over. Meteorologists had been warning residents about a two-day heat wave, but these temperatures did not end that soon. When the heat wave broke a week later, city streets had buckled the records for electrical use were shattered and power grids had failed, leaving residents without electricity for up to two days. And by July 20, over seven hundred people had perished—more than twice the number that died in the Chicago Fire of 1871, twenty times the number of those struck by Hurricane Andrew in 1992—in the great Chicago heat wave, one of the deadliest in American history. Heat waves in the United States kill more people during a typical year than all other natural disasters combined. Until now, no one could explain either the overwhelming number or the heartbreaking manner of the deaths resulting from the 1995 Chicago heat wave. Meteorologists and medical scientists have been unable to account for the scale of the trauma, and political officials have puzzled over the sources of the city's vulnerability. In Heat Wave, Eric Klinenberg takes us inside the anatomy of the metropolis to conduct what he calls a "social autopsy," examining the social, political, and institutional organs of the city that made this urban disaster so much worse than it ought to have been. Starting with the question of why so many people died at home alone, Klinenberg investigates why some neighborhoods experienced greater mortality than others, how the city government responded to the crisis, and how journalists, scientists, and public officials reported on and explained these events. Through a combination of years of fieldwork, extensive interviews, and archival research, Klinenberg uncovers how a number of surprising and unsettling forms of social breakdown—including the literal and social isolation of seniors, the institutional abandonment of poor neighborhoods, and the retrenchment of public assistance programs—contributed to the high fatality rates. The human catastrophe, he argues, cannot simply be blamed on the failures of any particular individuals or organizations. For when hundreds of people die behind locked doors and sealed windows, out of contact with friends, family, community groups, and public agencies, everyone is implicated in their demise. As Klinenberg demonstrates in this incisive and gripping account of the contemporary urban condition, the widening cracks in the social foundations of American cities that the 1995 Chicago heat wave made visible have by no means subsided as the temperatures returned to normal. The forces that affected Chicago so disastrously remain in play in America's cities, and we ignore them at our peril. For the Second Edition Klinenberg has added a new Preface showing how climate change has made extreme weather events in urban centers a major challenge for cities and nations across our planet, one that will require commitment to climate-proofing changes to infrastructure rather than just relief responses.

their interests drive the climate change denial machine We also see that climate policymakers who embrace big science approaches and solutions to climate change are predominantly male with an ideology of perpetual economic growth and an agenda that marginalizes the interests of women and developing economies The book uses vivid case studies to highlight the often surprising gendered impacts of climate changes This new edition is a thorough update that includes revised and new chapters and new material that takes account of the significant advances in climate research environmental and social theory and the many political and social challenges posed in the wake of US elections Covid 19 pandemic and rapidly changing climate and environment The new edition also takes account of important social and cultural movements that resist challenges to women s rights and advocate for gender sexuality and racial justice This book will appeal to students researchers and academicians interested in environmental studies and gender studies It also will be of interest to policymakers activists and others involved with environmental policy and governance

Wee-Kiat Lim, 2020-11-22 This book looks at the then nascent emergency management sector in China specifically the 2003
2012 period that arose from the 2003 SARS crisis and subsequently set the stage for its responses to the COVID 19 pandemic
Covering not only the amended and new laws and regulations at the national level the book also includes the rearrangement
and creation of the organizational structures as well as the response plans for individual emergencies that were either
recrafted or created during this period Beyond chronicling the milestones and products of this transformation this book
highlights the key ideas and ideals that guided the various stakeholders from the governing elites to the policy experts during
this process The book demonstrates how definitions of emergency management and emergency categories as well as other
ideational objects were initially either absent or weakly developed but were refined to the extent that they helped corral
disparate actors into China's new organizational field of emergency management *Planning for Community-based Disaster

considerable depth the multifaceted matrix of natural and human made disasters It examines their bearing on the loss of
human and productive capital the conduct of national policies and the setting of national development priorities and on the
nature of international aid and bilateral assistance strategies and programs of donor countries In order to ensure the efficacy
and appropriateness of their support for disaster survivors international agencies humanitarian and disaster relief
organizations scholars non governmental organizations and members of the global emergency management community need
to have insight into best practices and lessons learned from various disasters across national and cultural boundaries The
evidence obtained from the numerous case studies in this volume serves to build a worldwide community that is better
informed about the cultural and traditional contexts of such disasters and better enabled to prepare for respond to and finally
rebuild sustainable communities after disasters in different environments The main themes of the case studies include the

principles for improving the built environment's capacities for disaster risk management through the integration of disaster
risk reduction education into the curricula of colleges and universities the need to engage the whole community to build
inclusive governance structures as prerequisites for addressing climate change vulnerability and fostering resilience and

There are many current socio environmental conflicts and problems around the world that affect distinct nationalities races or ethnicities Part of the solution to these issues involves interdisciplinary scholarship to make sense of the communication challenges that are involved However current research in this area has lacked clear focus on the ways in which environmental issues are culturally and socially constructed by racial and ethnic minorities This volume aims to improve our understanding of culturally bounded rationalities across racial and ethnic groups facing environmental challenges as they relate to the formation of environmental identities environmental injustice political activism public engagement and media representations among others The ideas presented in this book dovetail with the idea that environmental communication scholars and practitioners can effectively intervene to engage ethnic groups that traditionally are not included in decision making or deliberation processes that directly affect their livelihoods Considering problems such as the siting of industrial facilities flooding droughts climate change and air and water pollution this book will be of great interest to students scholars and practitioners of environmental communication **Public / Community Health and Nursing Practice** Christine L. Byrnes,Iván Sandoval-Cervantes,2022-08-31 This volume bridges the gap between forensic and cultural anthropology in how both disciplines describe and theorize the dead highlighting the potential for interdisciplinary scholarship As applied disciplines dealing with some of the most marginalized people in our society forensic anthropologists have the potential to shed light on important and persistent social issues that we face today Forensic anthropologists have successfully pursued research agendas primarily focused on the development of individual biological profiles time since death recovery and identification Few however have taken a step back from their lab bench to consider how and why people become forensic cases or place their work in a larger theoretical context Thus this volume challenges forensic anthropologists to reflect how we can use our toolkit and databases to address larger social issues and quandaries that we face in a world where some are spared from becoming forensic anthropology cases and others are not As witnesses to violence crimes against humanity and the embodied consequences of structural violence we have the opportunity and arguably the responsibility to transcend the traditional medico legal confines of our small sub discipline by synthesizing forensic anthropology casework into theoretically grounded social science with potentially transformative impacts at a global scale *Handbook of Environmental Sociology* Beth Schaefer Caniglia,Andrew Jorgenson,Stephanie A.
