THREAT TO THE FUTURE E. R. Ramdohr,2024-12-18 We have blind faith that science and technology lead us to a bright future in which human beings will find happiness and personal fulfillment But already today there are subterranean currents that threaten that splendid future There is a huge conspiracy afoot Have you heard of the Neo Luddites In this novel you realize the human society in 2064 subjected to the will of the new inquisitors who have created a current that terrifies humanity with the worst dangers if it continues its development A biochemist a Nobel candidate has become the champion of the defense of science and technology He hires a writer to write his memoirs and a special relationship develops between them She is a faithful representative of a generation that has lost all will to act and transcend Life has become grey tedious and without any affective commitment Human beings no longer want to start a family have children or make commitments of any kind Sex has become an activity totally devoid of feeling Will the transhuman scientist be able to change the writer s mood and make her find a transcendent reason to live The lives of both are not exempt from danger they are discovered by the anti science police and must flee to save themselves The leader of the inquisitor group threatens them publicly and does not rest in her intention to destroy them Can they overcome the threat In the end they discover that the terrible woman is much closer than they could have imagined Only the miracle of science would be able to reverse the situation in that irrational society and completely tired of living *Reading the World's Stories* Annette Y. Goldsmith,Theo Heras,Susan

Rosenthal,2024-04-26 Over the past several decades writers such as Margaret Atwood Paolo Bacigalupi Octavia E Butler and Kathy Jetn il Kijiner have explored climate change through literature reflecting current anxieties about humans impact on the planet Emphasizing the importance of interdisciplinarity this volume embraces literature as a means to cultivate students understanding of the ongoing climate crisis ethics in times of disaster and the intrinsic intersectionality of environmental issues Contributors discuss speculative climate futures the Anthropocene postcolonialism climate anxiety and the usefulness of storytelling in engaging with catastrophe The essays offer approaches to teaching interdisciplinary and cross listed courses including strategies for team teaching across disciplines and for building connections between humanities majors and STEM majors The volume concludes with essays that explore ways to address grief and to contemplate a hopeful future in the face of apocalyptic predictions Environmental Science George Tyler Miller,1994 This concise introduction to environmental science a shorter alternative to Miller s Living in the Environment uses basic and easily understandable scientific laws principles and concepts to help students understand environmental and resource problems and the possible solutions to

these problems It includes many full color illustrations and photographs and a writing style that is clear personal and lively Extensive reviewing by hundreds of experts and Miller s careful research covering more than 20 000 sources ensure the text s accuracy and currency During the early 1970s Miller s texts helped shape and define the environmental science course Today they are best sellers used by thousands of students across the country This new edition is a major revision the most extensive since the first edition was published Each chapter is thoroughly revised and some detail has been added The book s 460 illustrations are designed to present complex ideas in understandable ways and to relate learning to the real world

AI in and for Africa Susan Brokensha, Eduan Kotzé, Burgert A. Senekal, 2023-05-02 AI in and for Africa A Humanistic Perspective explores the convoluted intersection of artificial intelligence AI with Africa s unique socio economic realities This book is the first of its kind to provide a comprehensive overview of how AI is currently being deployed on the African continent Given the existence of significant disparities in Africa related to gender race labour and power the book argues that the continent requires different AI solutions to its problems ones that are not founded on technological determinism or exclusively on the adoption of Eurocentric or Western centric worldviews It embraces a decolonial approach to exploring and addressing issues such as AI s diversity crisis the absence of ethical policies around AI that are tailor made for Africa the ever widening digital divide and the ongoing practice of dismissing African knowledge systems in the contexts of AI research and education Although the book suggests a number of humanistic strategies with the goal of ensuring that Africa does not appropriate AI in a manner that is skewed in favour of a privileged few it does not support the notion that the continent should simply opt for a one size fits all solution either Rather in light of Africa s rich diversity the book embraces the need for plurality within different regions AI ecosystems The book advocates that Africa inclusive AI policies incorporate a relational ethics of care which explicitly addresses how Africa s unique landscape is entwined in an AI ecosystem The book also works to provide actionable AI tenets that can be incorporated into policy documents that suit Africa s needs This book will be of great interest to researchers students and readers who wish to critically appraise the different facets of AI in the context of Africa across many areas that run the gamut from education gender studies and linguistics to agriculture data science and economics This book is of special appeal to scholars in disciplines including anthropology computer science philosophy and sociology to name a few
