The Miracle of Perfect Eyesight The Truth About The Eyes It is said that the eyes are the windows of the soul. How clear is your vision? Can you see the world without blurry vision or distortion? The so-called normal eye can easily read the 20 foot line on the Snellen Eye Test Chart at 20 feet away; this is called 20/20 vision. There is no limit as to how much one can improve their vision beyond the 20/20 range. Healthy eyes are a marvel of nature's creation. A person with above average eyesight can easily read the 10 foot line, smallest bottom line on the Snellen Eye Test Chart at 20 feet away, 20/10 vision. I have seen people who can read the 10 foot line at 50 to 60 feet away, 60/10 vision. This is called telescopic vision. There is also no limit to reading small Microscopic Type Print known as microscopic vision. There is no limit to how sharp and clear one can see in the distance and close up. We are all walking, talking, seeing miracles of Great Nature. The sages say human beings are solidified sunlight or trails of light because our eyesight and our very life is totally dependent on the Solar Orb. We would all become blind without the healing rays of sunlight upon our retina. Sunlight also gives us natural Vitamin D for healthy skin and eyes. The eye training secrets contained in this book have taken me from 20/600 progressive advanced myopia or blind without glasses to better than 20/20 vision. If you practice and are persistent in your eye training, you too can improve vision quickly.

Eye Muscles Accommodation The Mystery Unveiled In order to see properly, the eyes must accommodate. Accommodation takes place when focusing on various distances, close and far. Which muscles are doing the focusing during accommodation is debatable among Ophthalmologists. Dr. Helmholtz, an early eye doctor, found that only the ciliary eye muscles do the accommodating. The Helmholtz Theory is the accepted belief of most modern eyeglass doctors. Dr. Bates, a natural eye specialist, felt that the two oblique eye muscles performed eye accommodation by compressing the round eyeball in the middle and making it longer horizontally. Dr. Bates cut these muscles in rabbits and found the eyes could not accommodate. When he injected a drug to paralyze the oblique muscles, the eyes failed to accommodate. When he put together the severed muscles and washed out the drug, the rabbit's eyes were able to accommodate again. The Helmholtz theory holds that accommodation is due to the expansion and contraction of the crystalline lens caused by the action of the ciliary muscle. Dr. Bates, through his experiments, discovered and proved that it is not the crystalline lens but the six external muscles that act upon the eyeball and give the eye its ability to adjust and accommodate to near and far objects. The fact that patients who have had the crystalline lens removed are still able to see and have the power to accommodate should be convincing proof of this theory. It is obvious both the oblique

muscles and the ciliary muscles work in conjunction when focusing Here is the reason why the normal eye when looking at a distant object becomes shortened and when looking at a close object is elongated The external muscles oblique recti iris and the ciliary muscles all enable the eyes to accommodate properly The external muscles lengthen and shorten the eyeball to enable light rays to fall upon the macula The iris adjusts the pupil for the amount of light necessary to see clearly And the ciliary muscle contracts the lens to focus upon the object The ciliary muscle changes the lens and directs the rays of light to focus upon the macula or center of sight While looking at a distant object of more than twenty feet away the rays come into the eyes parallel When looking at a close point rays come into the eyes at an angle The normal eye must accommodate these rays in order to see clearly a close or distant point All rays fro Good Housekeeping ,1928 *Drawing with Children* Mona Brookes,1996-06-04 The definitive guide to encouraging drawing and creativity for parents and teachers alike Mona Brookes s clear and practical approach to drawing has yielded astounding results with children of all ages and beginning adults Her unique drawing program has created a revolution in the field of education and a sense of delight and pride among the thousands of students who have learned to draw through her Monart Method This revised and expanded edition includes Information on multiple intelligence and the seven ways to learn An inspirational chapter on helping children with learning differences An integrated studies chapter with projects geared for reading math science ESL multicultural studies and environmental awareness A sixteen page color insert and hundreds of sample illustrations This invaluable teaching tool not only guides readers through the basics but also gives important advice on creating a nurturing environment in which self expression and creativity can flourish Both practical and enlightening *Drawing With Children* inspires educators and parents to bring out the artist in each of us **Play your way to better eyesight** Orit Kruglanski ,2023-02-21 Teaching children how to improve their eyesight naturally is a lifelong gift especially now with childhood vision problems on the rise *Play Your Way to Better Eyesight* provides a much needed resource for parents and educators to understand why eyesight problems occur and how to reduce or avoid them using solutions adapted for children Presented in an easy to read conversational style this book offers a clear explanation of the Bates Method of natural vision and the emotional aspects of vision problems as well as providing game ideas and strategies designed to show care givers how to guide children in caring for their eyes This practical resource is a must read for anyone wishing to make a positive and lasting impact on children s eyesight **Better Vision Now** Clara A. Improve your eyes at home R. Brooks Simpkins,2019-03-12 There is not any mystery about the eyes when you are told something about them I have endeavoured to write this little book in a manner resembling a fireside chat There are not any diagrams and neither are there any technical terms other than to call some parts of the eyes by their actual names It has not been easy to portray rather complicated knowledge in simple words but I hope that my readers will find my descriptions easy to read and helpful also In those days after enjoying normally good sight as a boy I had become very shortsighted and intensely disliked having to wear glasses Gradually over the years the urge developed to investigate the true reason for my having to do so and I recalled that when as an early teenager I rebelled against the decision of an eminent ophthalmic surgeon to prescribe my first pair of glasses he generously admitted to me that much was not yet known about the eyes The urge to become an independent research worker grew and eventually became so strong that I cast all else aside to respond to its beckoning My authority for writing what I have written in the pages that follow is not supported by conventional diplomas of qualification but instead it is provided by more than thirty years experience employing new approaches to affections of the eyes and defective vision and applying advanced methods of remedial treatment to the eyes of children and men and women of all ages
