Herbicide Classes In Development Mode Of Action Targets Genetic Engineering Chemistry:

Herbicide Classes in Development Peter Böger, Ko Wakabayashi, Kenji Hirai, 2012-12-06 Chemical pest control is in use in practically every country in the world since agrochemicals play a decisive role in ensuring food supply and protection against damage by pests insects and pathogenic fungi Particularly in the half century since World War II food production has risen dramatically in most parts of the world In the last 20 years the yield of major crops has roughly doubled in Western agriculture and there is still the potential for further achievements particularly in the developing countries The world's cereal and rice production now more than 2 billion tons year has to increase by 2.4% annually to cope with the rising food demand caused mainly by the growing population and improvement of living standards in most of the developing countries Such a demand for food has to be achieved by higher yields from the restricted arable land already in use Global farm land resources are about 1.4 billion ha of which 1.2 billion ha is cultivated with major crops Experts agree that a future substantial addition of new productive areas is unlikely Those with a high yield potential are already in use new fields with a lower output may possibly be obtained by cultivation of arid or cold areas More recently new areas of large scale farmland have been developed in tropical regions of Latin America primarily in Argentina and Brazil at the cost of the destruction of tropical rain forest

Herbicides, 2021-06-23 Herbicides Chemistry Efficacy Toxicology and Environmental Impacts addresses contemporary debates on herbicide toxicology The reader is offered a comprehensive overview of this complex topic presented by internationally recognized experts Information presented will inform discussions on the use of herbicides in modern agricultural and other systems and their potential non target effects on human populations and various ecosystems The book covers these matters in concise language appropriate to engage both specialists in the research community and informed persons responsible for legislative funding and public health matters in the community at large The use of herbicides is an essential pillar of modern agricultural production systems Weeds if uncontrolled would reduce crop yield and result in massive economic damage Recently the heavy reliance on single herbicides has been linked to the development of weed resistance To combat resistant weeds farmers are advised to use a mix of several herbicides and to increase herbicide application rates As a result the toxicity of herbicides on human health and the environment has become a controversial topic Offers a comprehensive overview of herbicide science in modern agricultural systems Addresses the complex problems that can arise from herbicide use and misuse including weed resistance pollution and human health issues Uses recent examples to demonstrate the topical nature of this issue

Herbicides Mohammed Nagib Hasaneen, 2011-12-22 This volume contains two sections Mechanisms of herbicidal action chapters 1-4 and Mode of action of selected herbicides on controlling diseased weed growth and productivity and or growth and development of field crops chapters 5-10 Topics by chapters are molecular mechanism of action immunosensors laboratory studies molecular modeling weed resistance community response use of herbicides in biotech culture gene flow herbicides and risk herbicides persistence These recurring themes reinforce my view

held over a very long time that experience with one crop or problem can sometimes be relevant often to an unexpected extent to an apparently dissimilar situation in a different crop I hope that readers interested in herbicides and pesticides will be satisfied with all the chapters in the book as its content might be of interest and value to them in the future

Herbicides Marcelo Larramendy, Sonia Soloneski, 2011-01-08 The content selected in *Herbicides Theory and Applications* is intended to provide researchers producers and consumers of herbicides an overview of the latest scientific achievements Although we are dealing with many diverse and different topics we have tried to compile this raw material into three major sections in search of clarity and order Weed Control and Crop Management Analytical Techniques of Herbicide Detection and Herbicide Toxicity and Further Applications The editors hope that this book will continue to meet the expectations and needs of all interested in the methodology of use of herbicides weed control as well as problems related to its use abuse and misuse

Applied Photosynthesis Mohammad Najafpour, 2012-03-02 Photosynthesis is one of the most important reactions on Earth and it is a scientific field that is intrinsically interdisciplinary with many research groups examining it This book is aimed at providing applied aspects of photosynthesis Different research groups have collected their valuable results from the study of this interesting process In this book there are two sections Fundamental and Applied aspects All sections have been written by experts in their fields The book chapters present different and new subjects from photosynthetic inhibitors to interaction between flowering initiation and photosynthesis
