extensive cross referencing *Joseph Beuys and the Artistic Education* Carl-Peter Buschkühle, 2020-03-23 Joseph Beuys significantly influenced the development of art in recent decades through his expanded definition of art In his art and reflections on art he raised far reaching questions on the nature of art and its central importance for modern education His famous claim Every human is an artist points to the fundamental ability of every human to be creative in the art of life with respect to the development of one s own personality and one s actions within society Beuys saw society as an artwork in a permanent process of transformation a social sculpture in which every person participated and for which everyone should be educated as comprehensively as possible Beuys describes pedagogy as central to his art This book thus examines important aspects of Beuys s art and theory and the challenges they raise for contemporary artistic education It outlines the foundational theoretical qualities of artistic education and discusses the practice of artistic projects in a series of empirical examples The author Carl Peter Buschkühle documents projects he has undertaken with various high school classes In additional chapters Mario Urla discusses the great value of artistic projects in primary school and Christian Wagner reflects on his collaboration with the performance artist Wolfgang Sautermeister and school students in a socially disadvantaged urban area Artistic education has become one of the most influential art pedagogical concepts in German speaking countries This book presents its foundations and educational practices in English for the first time **Making Sense Of The Senses**

Tobias Wibble, 2022-06-09 Making Sense of the Senses provides an easily understandable and engaging overview of the senses The book allows readers insights into how humans and other animals perceive the world reflecting a level of knowledge similar to that acquired by studying neuroscience at an undergraduate level In order to offer an accessible introduction to the science it uses relatable examples to uncover the history evolution and biological principles of the way we see smell hear taste touch and more Rather than only focusing on the five primary senses you can see on the cover Making Sense of the Senses dives deep into the various methods through which life across the planet surveys the world and guides the reader through the lesser known methods through which we humans interpret our surroundings In this way we come across some amazing abilities that we often forget we possess Humans are nevertheless rather average creatures compared to many sensory specialists So when we compare our relatively modest capabilities to those of other species across the animal kingdom we are forced to yield our anthropocentric sense of supremacy This book will introduce how biological life developed the capacity to detect magnetic fields radioactivity and many more phenomena that until recently were inaccessible to humans By contextualising and comparing how the senses operate this book covers the sensory systems in a way no popular science book has previously done If you are starting your career in neuroscience or simply want to learn more about the ways our biology guides us through life Making Sense of the Senses will change the way you think about our perception of the world **Plato, Aristotle and Socrates** , Information Theory , **Transitions and**

Transformations in Learning and Education Päivi Tynjälä, Marja-Leena Stenström, Marjatta Saarnivaara, 2012-03-28 The

breakneck speed of change in today's societies creates enormous challenges for educational institutions at all levels. This volume explores ways how to manage change in educational processes and contexts focusing in particular on the concepts of transition and transformation. How do we educate a skilled workforce, sensitive professionals and responsive citizens who are able not only to cope with change but also to adopt required roles as agents of change? How do we prepare students and employees to cope adequately with changes and transitions in their careers and personal lives? The first of this book's three sections deals with the conceptual and theoretical aspects of transition, transformational processes and human development. It defines these concepts and examines the ways in which educational theory and praxis understand concepts of change and development. The second section presents empirical studies that offer differing perspectives on educational transitions covering the lifespan from early years education to lifelong learning. The third part of the volume focuses on issues of learning and pedagogy and argues that educational practices should change with the changing world. With numerous concrete examples included in the analysis and with studies taking a range of forms from personal histories to large scale surveys, this new book is a major addition to the literature in a field that has key implications for our future.

Jacquier,2017-03-21 This book is the result of fifteen years of studies on art in collaboration with mathematicians in particular Jean Paul Guichard and the IREM of Poitiers Until the Renaissance the composition of painting and architecture was based on a specific geometry called with the eyes Its adventure began before writing and books report nothing about This practice avoids calculation for fear of scaring numbers thanks to a grid where the figures are constructed Thales like many Greek philosophers went to Egypt to learn it he will give his name to the axioms Then all the properties are demonstrated with visual evidences qualified as monstrations in particular the four manifestations of the golden ratio in the triangle 3 4 5 This book offers a rich pedagogical material as well as a solid basis for reflection on art and history Rublev Botticelli and D rer are the great masters of this art The color images for the screen and the B W for print are accessible on the Internet *The Devil* Nwaocha Ogechukwu,2012-05-30 Paradigmatic Shifts in Geographical Thought Lalita

Rana,2020-01-01 In advancing disciplines like Geography the methodological debate is a sign of health In Geography there has been extreme diversity of viewpoints on both philosophy and methodology with constant extension and also a shift in focus The methodology of geography came under debate for the first time during the middle of twentieth century when the paper published by F K Schaefer an American scholar brought both the qualitative and quantitative revolution in geographic development Shortly after this publication were discussed the paradigmatic shifts in a discipline by Thomas S Kuhn another American scholar through his seminal work in which he painted a picture of the development of science quite unlike that had gone before In order to elucidate this process of development of science Kuhn prepared a model termed as the Paradigm of Science Distinct parallels may be sought between the historical evolution of scientific discipline as explained by Thomas Kuhn and the historical evolution of the discipline of geography Seeking inspiration from the works of both of the great scholars mentioned above the present book examines the evolution of geographical thought from the perspective of Thomas Kuhn Two publications of mine 2008 2014 are on this line only However the methodological literature to understand the philosophical background making possible this disciplinary growth is too small The purpose here is to explore and screen the growth and development of Geography under sequential methodological changes over time in the light of various paradigmatic shifts with the acknowledgement of crises and revolutionary phases of development in the discipline Accordingly the work identifies eight paradigmatic shifts intercepted by eight phases of crises in the discipline

Western Thinker's in Political Science Dr.Shrikant Yelegaonkar,2015-04-23 Political science is a social science discipline that deals with systems of government and the analysis of political activity and political behavior It deals extensively with the theory and practice of politics which is commonly thought of as the determining of the distribution of power and resources Political scientists see themselves engaged in revealing the relationships underlying political events and conditions and from these revelations they attempt to construct general principles about the way the world of politics works **Romantic Women**

Epicurus And The Pleasant Life Haris Dimitriadis, 2017-11-08 The idea that happiness is a choice accessible to all is far from new the ancient Greek philosopher Epicurus developed the Natural Philosophy of life over two thousand years ago providing practical contemporary guidelines to finding meaning and happiness Unlike Plato who valued the divine logic above all Epicurus argued that the pursuit of ideals produced by logic alone leads to inner conflict cognitive dissonance dissatisfaction and even depression He suggested that by first embracing our natural desires then using logic to determine which choices will increase pleasure over time and using our will to take action we could learn and change and achieve happiness Join the author Haris Dimitriadis on a journey through the history of philosophical thought as well as an in depth look at the modern neuroscience psychology and astrophysics and discover why the ancient Epicurean Philosophy of Nature matters as much today as it did two thousand and three hundred years ago

The Influence of Values on Consumer Behaviour Erik Kosteljik, 2016-08-05 Substantial progress has been made in the conceptualization of values within psychology The importance of values is also acknowledged in marketing and companies use values to describe the core associations of their brand Yet despite this the values concept has received limited attention in marketing theory The Influence of Values on Consumer Behaviour aims to bridge the gap between the conceptual progress of values in psychology and the current practice in marketing and branding literature It proposes the Value Compass a comprehensive value system that is cross culturally applicable to consumer behaviour and brand choice The values concept is used in psychology to identify the motivations underlying behaviour a concept that marketers have borrowed to define brand values This has led to conceptual confusion Whereas in psychology the values system is perceived as an integrated structure in marketing values are treated as abstract motivations that give importance to the benefits of consumption Attention in marketing has shifted away from brand values toward brand personality a set of human characteristics associated with a brand Despite its popularity brand personality has limitations in explaining consumer behaviour while the potential merits of a brand values concept have remained largely unexplored The book presents a meaningful alternative to the brand personality concept and promotes the benefits of using the Value Compass for assessing the effects of brand values and personal values on consumer choice As such it will be essential reading for academics and postgraduate students in the fields of marketing consumer psychology branding consumer choice behaviour and business studies
