Description:

As one of the most popular heat transfer texts, Jack Holman's *Heat Transfer* is noted for its clarity, accessible approach, and inclusion of many examples and problem sets. The new tenth edition retains the straight-forward, to-the-point writing style while covering both analytical and empirical approaches to the subject. Throughout the book, emphasis is placed on physical understanding while, at the same time, relying on meaningful experimental data in those situations that do not permit a simple analytical solution. New examples and templates provide students with updated resources for computer-numerical solutions.

The text is designed for chemical and biochemical engineering students, senior undergraduate year plus appropriate for capstone design courses where taken and professionals in industry, chemical process, biochemical, pharmaceutical, petrochemical sectors. Provides students with a text of unmatched relevance for chemical process and plant design courses and for the final year capstone design course. Written by practicing design engineers with extensive undergraduate teaching experience. Contains more than 100 typical industrial design projects drawn from a diverse range of process industries. NEW TO THIS EDITION Includes new content covering food, pharmaceutical and biological processes and commonly used unit operations. Provides updates on plant and equipment costs, regulations and technical standards. Includes limited online access for students to Cost Engineering's Cleopatra Enterprise cost estimating software. **Heat Transfer** Jack P. Holman, 1993 This text presents all material appropriate for a first course in heat transfer. This edition contains new material on design and computer applications and is the solutions manual for the main text. Simulation of Thermoelastic Behaviour of Spacecraft Structures Simon Appel, Jaap Wijker, 2021-08-31 This book provides recommendations for thermal and structural modelling of spacecraft structures for predicting thermoelastic responses. It touches upon the related aspects of the finite element and thermal lumped parameter method. A mix of theoretical and practical examples supports the modelling guidelines. Starting from the system needs of instruments of spacecraft, the reader is supported with the development of the practical requirements for the joint development of the thermal and structural models. It provides points of attention and suggestions to check the quality of the models. The temperature mapping problem, typical for spacecraft thermoelastic analysis, is addressed. The principles of various temperature mapping methods are presented. The prescribed average temperature method co-developed by the authors is discussed in detail together with its spin-off to provide high quality conductors for thermal models. The book concludes with the discussion of the application of uncertainty assessment methods. The thermoelastic analysis chain is computationally expensive. Therefore, the 2k-1 point estimate method of Rosenblueth is presented as an alternative for the Monte Carlo Simulation method, bringing stochastic uncertainty analysis in reach for large thermoelastic problems. *Solutions Manual to Accompany Heat Transfer, Seventh Edition* Jack Philip Holman, 1990 **Books in Print Supplement**, 2002 **The Publishers' Trade List Annual**, 1985 *Heat Transfer* Jack Philip
