Hair Follicle K. Morioka,2006-03-21 Each and every hair is much more than just the visible shaft there are also associated complex sheath structures of epidermal and dermal origin In the hair follicle cells undergo a variety of differentiation processes mostly depending on their layers and positions therein and electron microscopy reveals a very complex architecture The structure of a particular layer such as Henle s layer of the inner root sheath is not uniform Rather cells drastically change during the course of differentiation By simply comparing electron micrographs of cells of a layer at different degrees of differentiation one can hardly recognize them as belonging to the same layer As readers will see this book contains many superb electron mic graphs from low magni cation panoramic views for orientation to hi power views showing ultrastructural detail Captions and schematic drawings are also very helpful in reading electron micrographs and derstanding the structural detail In this way Dr Morioka has succeeded in dissecting the complex hair follicle at the ultrastructural level

Sister Style Nadia E. Brown, Danielle Casarez Lemi, 2021-01-19 In Sister Style Nadia E Brown and Danielle Casarez Lemi argue that Black women's political experience and the way that voters evaluate them is shaped overtly by their skin tone and hair texture with hair being a particular point of scrutiny They ask what the politics of appearance for Black women mean for Black women politicians and Black voters and how expectations about self presentation differ for Black women versus Black men White men and White women Brown and Lemi base their argument in part on focus groups with Black women candidates and elected officials and show that there are generational differences that determine what sorts of styles Black women choose to adopt and to what extent they change their physical appearance based on external expectations

The Hair Fibre: Proteins, Structure and Development Jeffrey E. Plowman, Duane P. Harland, Santanu Deb-Choudhury, 2018-05-24 Hair is a sophisticated bio based material whether it is on a human head or part of a mammalian coat In particular the role of the proteins in the follicle integral to hair development are not well understood This new book seeks to integrate the latest research in proteomic and morphological studies into a coherent description of fibre development from the follicle to its final mature keratinized form To achieve this the book has been divided into three sections The first describes the keratins their associated proteins and how they assemble into intermediate filaments in the fibre The second covers the latest information on the morphological changes that occur from the base of the follicle through the keratinization process to the mature fibre and the role that proteins play in this The final section delves into fundamental fibre properties such as crosslinking thermal and oxidative modifications and how these affect the mature fibre The editors of this book are internationally recognised for their work in the area of mammalian hair Jeffrey Plowman for his knowledge of the proteomics of the fibre Santanu Deb Choudhury for his work in the area of crosslinking in the fibre and Duane Harland for his understanding of the morphological development of the fibre Together they have collected material from other international experts Leopold Eckhart and Florian Ehrlich for their knowledge of the evolution of keratins Dong Dong Wu and David Irwin for their studies on keratin associated protein evolution David Parry and Bruce Fraser for their work on keratin and keratin associated protein structure and assembly John McKinnon for his studies on macrofibril formation Crisan Popescu for the thermodynamics of keratins and Jolon Dyer for his oxidative modification studies of keratins This book provides a comprehensive introduction and useful reference guide to hair biology and will be of interest to both scientists and technologists
