Arbib, Derek Bickerton, 2010-09-03 Somewhere and somehow in the 5 to 7 million years since the last common ancestors of humans and the great apes our ancestors got language The authors of this volume

all agree that there was no single mutation or cultural innovation that took our ancestors directly from a limited system of a few vocalizations primarily innate and gestures some learned to language They further agree to use the term protolanguage for the beginnings of an open system of symbolic communication that provided the bridge to the use of fully expressive languages rich in both lexicon and grammar But here consensus ends and the theories presented here range from the compositional view that protolanguage was based primarily on words akin to the nouns and verbs etc we know today with only syntax lacking to the holophrastic view that protolanguage used protowords which had no meaningful subunits which might nonetheless refer to complex but significantly recurrent events The present volume does not decide the matter but it does advance our understanding The lack of any direct archaeological record of protolanguage might seem to raise insuperable difficulties However this volume exhibits the diversity of methodologies that can be brought to bear in developing datasets that can be used to advance the debate These articles were originally published as Interaction Studies 9 1 2008

**Maladapting Minds** Pieter R. Adriaens, Andreas De Block, 2011-03-10 Ever since Darwin psychiatrists have been tempted to put evolutionary theory to use in their efforts to understand and explain mental disorders Varying in success scope and scientific rigour these attempts have often caught the attention of philosophers There are many studies about how the philosophy of psychiatry has been informed by twentieth century continental philosophy in focusing on topics such as embodiment narrativity and gender as well as analytic philosophy in focusing on more conceptual issues Thus far however there are simply no studies about how philosophical issues in psychiatric theory and practice can be and have been informed by evolutionary theory Maladapting Minds explores the relationship between evolutionary theory and philosophy of psychiatry In particular it discusses a number of reasons why philosophers of psychiatry should take an interest in evolutionary explanations of mental disorders and more generally in evolutionary thinking The many chapters deal with evolutionary accounts of various mental disorders including phobias fetishism developmental disorders depression autism spectrum disorders and schizophrenia Written by both world class philosophers psychologists and evolutionary psychiatrists this volume illustrates that many debates in contemporary philosophy of psychiatry are profoundly influenced by evolutionary approaches to mental disorders In doing so it represents the very first attempts to critically explore the interface between evolutionary theory and philosophy of psychiatry It is important reading for psychiatrists philosophers of mind and evolutionary psychologists
