Steiner, 2011-08-14 Headache disorders are among the most common disorders of the nervous system They are pandemic and in many cases they are recurrent and can accompany the patient for the whole life These disorders impose a substantial burden on headache sufferers on their families and on society the individual impact is measured by the frequency and severity of attacks while the societal burden is measured in terms of loss of activity at work and school as well as of costs for the health system As a matter of facts headaches are ranked in the top ten and maybe the top five causes of disability worldwide they are therefore extraordinarily common Population based studies have mostly focused on migraine which even if it is the most frequently studied headache disorder is not the most common Other types of headache such as the more prevalent TTH and sub types of the more disabling chronic daily headache have so far received less attention and need to be better investigated This book will provide a useful tool to a wide medical population who is required specific skills to diagnose and manage these frequent and often disabling disorders Furthermore it could also represents a compendium for medical students who are usually introduced to this topic through multidisciplinary university programmes *Handbook of Pain Medicine - E-Book* G.
