Leading authorities describe the most important theoretical approaches in personality and review the state of the science in five broad content areas: biological bases, development, self and social processes, cognitive and motivational processes, and emotion, adjustment, and health. Within each area, chapters present innovative ideas, findings, research designs, and measurement approaches. Major new research is also presented on such defining topics as the self, the psychological unconscious, motivational processes, emotion, and emotion regulation, stress, coping, and health, interpersonal behavior, personality assessment, and more. **Child Psychopathology, Third Edition** Eric J.
