Limdep 10 Econometric Modeling Guide:

A Land of Milk and Butter Markus Lampe, Paul Sharp, 2019-04-12 How and why does Denmark have one of the richest most equal and happiest societies in the world today Historians have often pointed to developments from the late nineteenth century when small peasant farmers worked together through agricultural cooperatives whose exports of butter and bacon rapidly gained a strong foothold on the British market This book presents a radical retelling of this story placing largely German speaking landed elites rather than the Danish peasantry at center stage After acquiring estates in Denmark these elites imported and adapted new practices from outside the kingdom thus embarking on an ambitious program of agricultural reform and sparking a chain of events that eventually led to the emergence of Denmark's famous peasant cooperatives in 1882 A Land of Milk and Butter presents a new interpretation of the origin of these cooperatives with striking implications for developing countries today

The Econometrics of Panel Data László Mátyás, Patrick Sevestre, 2013-12-01 The aim of this volume is to provide a general overview of the econometrics of panel data both from a theoretical and from an applied viewpoint Since the pioneering papers by Edwin Kuh 1959 Yair Mundlak 1961 Irving Hoch 1962 and Pietro Balestra and Marc Nerlove 1966 the pooling of cross sections and time series data has become an increasingly popular way of quantifying economic relationships Each series provides information lacking in the other so a combination of both leads to more accurate and reliable results than would be achievable by one type of series alone Over the last 30 years much work has been done investigation of the properties of the applied estimators and test statistics analysis of dynamic models and the effects of eventual measurement errors etc These are just some of the problems addressed by this work In addition some specific difficulties associated with the use of panel data such as attrition heterogeneity selectivity bias pseudo panels etc have also been explored The first objective of this book which takes up Parts I and II is to give as complete and up to date a presentation of these theoretical developments as possible Part I is concerned with classical linear models and their extensions Part II deals with nonlinear models and related issues logit and probit models latent variable models duration and count data models incomplete panels and selectivity bias point processes and simulation techniques

Modeling Ordered Choices William H.

Greene, David A. Hensher, 2010-04-08 It is increasingly common for analysts to seek out the opinions of individuals and organizations using attitudinal scales such as degree of satisfaction or importance attached to an issue Examples include levels of obesity seriousness of a health condition attitudes towards service levels opinions on products voting intentions and the degree of clarity of contracts Ordered choice models provide a relevant methodology for capturing the sources of influence that explain the choice made amongst a set of ordered alternatives The methods have evolved to a level of sophistication that can allow for heterogeneity in the threshold parameters in the explanatory variables through random parameters and in the decomposition of the residual variance This book brings together contributions in ordered choice modeling from a number of disciplines synthesizing developments over the last fifty years and suggests useful extensions to account for the wide range of sources of influence on choice **Handbook of Empirical Economics and Finance** Aman Ullah, David E. A.
