**Open Source Law, Policy and Practice** Amanda Brock, 2022-10-10 Open Source Software has seen mass adoption in the last decade and potentially forms the majority of software today. It is realised through legal instruments: private law agreements, licences, governance and community norms, all of which lead to the sharing of intellectual property and to economic and commercial disruption in technology. Written by world leading Open Source and legal experts, this new edition of Open Source Law, Policy and Practice is fully updated with a global focus on technology and market changes over the last decade. The work delivers an in-depth examination of the community, legal and commercial structures relating to the usage and exploitation of Open Source. This enables readers to understand the legal environment within which Open Source operates and what is required for its appropriate governance and curation in enterprise and the public sector. This is achieved by focusing on three main areas: intellectual property rights, the governance of Open Source and the business and economic impacts.

The prize kindly sponsored by the Gerlind Ernst Denert Stiftung is awarded for excellent work within the discipline of Software Engineering which includes methods, tools and procedures for better and efficient development of high quality software. An essential requirement for the nominated work is its applicability and usability in industrial practice. The book contains eleven papers that describe the works by Jonathan Brachthuser EPFL Lausanne entitled 'What You See Is What You Get: Practical Effect Handlers in Capability Passing Style', Mojdeh Golagha s Fortiss Munich thesis 'How to Effectively Reduce Failure Analysis Time', Nikolay Harutyunyan s FAU Erlangen N rnberg work on 'Open Source Software Governance', Dominic Henze s TU Munich research about 'Dynamically Scalable Fog Architectures', Anne Hess s Fraunhofer IESE Kaiserslautern work on 'Crossing Disciplinary Borders to Improve Requirements Communication', Istvan Koren s RWTH Aachen U thesis 'DevOpsUse: A Community Oriented Methodology for Societal Software Engineering', Yannic Noller s NU Singapore work on 'Hybrid Differential Software Testing', Dominic Steinhofel s TU Darmstadt thesis entitled 'Ever Change a Running System: Structured Software Reengineering Using Automatically Proven Correct Transformation Rules', Peter W gemann s FAU Erlangen N rnberg work 'Static Worst Case Analyses and Their Validation Techniques for Safety Critical Systems', Michael von Wenckstern s RWTH Aachen U research on 'Improving the Model Based Systems Engineering Process' and Franz Zieris s FU Berlin thesis on 'Understanding How Pair Programming Actually Works in Industry: Mechanisms, Patterns and Dynamics' which actually won the award. The chapters describe key findings of the respective works, show their relevance and applicability to practice and industrial software engineering projects and provide additional information and findings that have only been discovered afterwards, e.g. when applying the results in industry. This way, the book is not only interesting to other researchers but also to industrial software professionals who would like to learn about the application of state of the art methods in their daily work.
