Schweizer, A. Sklar, 2011-11-30 This distinctly nonclassical treatment focuses on developing aspects that differ from the theory of ordinary metric spaces working directly with probability distribution functions rather than random variables The two part treatment begins with an overview that discusses the theory's historical evolution followed by a development of related mathematical machinery The presentation defines all needed concepts states all necessary results and provides relevant proofs The second part opens with definitions of probabilistic metric spaces and proceeds to examinations of special classes of probabilistic metric spaces topologies and several related structures such as probabilistic normed and inner product spaces Throughout the authors focus on developing aspects that differ from the theory of ordinary metric spaces rather than simply transferring known metric space results to a more general setting     *Thermodynamics of Small Systems* Terrell L. Joseph Landin, 2012-08-29 This self contained text covers sets and numbers elements of set theory real numbers the theory of groups group isomorphism and homomorphism theory of rings and polynomial rings 1969 edition *Principles of Electrodynamics* Melvin Schwartz, 2012-04-24 The 1988 Nobel Prize winner establishes the subject's mathematical background reviews the principles of electrostatics then introduces Einstein's special theory of relativity and applies it to topics throughout the book *The Theory of Lie Derivatives and Its Applications* Kentaro Yano, 2020-05-21 Differential geometry has become one of the most active areas of math publishing yet a small list of older unofficial classics continues to interest the contemporary generation of mathematicians and students This advanced treatment of topics in differential geometry first published in 1957 was praised as well written by The American Mathematical Monthly and hailed as undoubtedly a valuable addition to the literature Its topics include Spaces with a non vanishing curvature tensor that admit a group of automorphisms of the maximum order Groups of transformations in generalized spaces The study of global properties of the groups of motions in a compact orientable Riemannian space Lie derivatives in an almost complex space For advanced undergraduates and graduate students in mathematics **Applied Probability Models with Optimization Applications** Sheldon M. Ross, 2013-04-15 Concise advanced level introduction to stochastic processes that arise in applied probability Poisson process renewal theory Markov chains Brownian motion much more Problems References Bibliography 1970 edition **Numerical Methods for Two-Point Boundary-Value Problems** Herbert B. Keller, 2018-11-14 Elementary yet rigorous this concise treatment explores practical numerical methods for solving very general two point boundary value problems The approach is directed toward students with a knowledge of advanced calculus and basic numerical analysis as well as some background in ordinary differential equations and linear algebra After an introductory chapter that covers some of the basic prerequisites the text studies three techniques in detail initial value or shooting methods finite difference methods and integral equations methods Sturm Liouville eigenvalue problems are treated with all three techniques and shooting is applied to generalized or nonlinear eigenvalue problems Several other areas of numerical analysis are introduced throughout the study The treatment concludes with more than 100 problems that augment and clarify the text and several research papers appear in the Appendixes **Vector and Tensor Analysis** Louis Brand, 2020-04-15 An outstanding introduction to tensor analysis for physics and engineering students this text admirably covers the expected topics in a careful step by step manner In addition to the standard vector analysis of Gibbs including dyadic or tensors of valence two the treatment also supplies an introduction to the algebra of motors The entire theory is illustrated by many significant applications Surface geometry and hydrodynamics are treated at length in separate chapters Nearly all of the important results are formulated as theorems in which the essential conditions are explicitly stated Each chapter concludes with a selection of problems that develop students technical skills and introduce new and important applications The material may be adapted for short courses in either vector analysis or tensor analysis Dynamic Optimization, Second Edition Morton I.

Kamien, Nancy L. Schwartz, 2013-04-17 Since its initial publication this text has defined courses in dynamic optimization taught to economics and management science students The two part treatment covers the calculus of variations and optimal control 1998 edition     Calculus of Variations Charles R.
