explanation of culture change have long been goals of archaeology Scientific graphs facilitate the visual thinking that allow
archaeologists to determine the relationship between variables and if well designed comprehend the processes implied by the
relationship Different graph types suggest different ontologies and theories of change and particular techniques of parsing
temporally continuous morphological variation of artefacts into types influence graph form North American archaeologists
have grappled with finding a graph that effectively and efficiently displays culture change over time Line graphs bar graphs
and numerous one off graph types were used between 1910 and 1950 after which spindle graphs displaying temporal
frequency distributions of specimens within each of multiple artefact types emerged as the most readily deciphered diagram
The variety of graph types used over the twentieth century indicate archaeologists often mixed elements of both Darwinian
variational evolutionary change and Midas touch like transformational change Today there is minimal discussion of graph
theory or graph grammar in introductory archaeology textbooks or advanced texts and elements of the two theories of
evolution are still mixed Culture has changed and archaeology provides unique access to the totality of humankind s cultural
past It is therefore crucial that graph theory construction and decipherment are revived in archaeological discussion **The**
