Abstract: *Classification and regression trees (CART) have been widely used in forest science. However, the use of CART in forest science has been limited by the lack of a good software package. This paper presents a new software package, called 'CART-forest', which is designed for forest science. The package is written in R and is available for free download from the Internet. The package includes a user-friendly graphical user interface (GUI) and a command-line interface. The GUI is designed for non-programmers and the command-line interface is designed for programmers. The package includes a number of functions for data manipulation, model building, model evaluation, and model interpretation. The package is easy to use and can be used for a wide range of forest science applications.*
