

MIL Blink Pattern

- If the MCS is not available, DTC can be read from the ECM memory by the MIL blink pattern.
- The number of MIL blinks is the equivalent of the main code of the DTC (the sub code cannot be displayed by the MIL).
- The MIL will blink the current DTC, in case the ECM detects the problem at present, when the ignition switch ON or idling with the sidestand down. The MIL will stay ON when the engine speed is over 1,700 rpm or with the sidestand up.
- The MIL has two types of blinks, a long blink and short blink. The long blink lasts for 1.3 seconds, the short blink lasts for 0.5 seconds. One long blink is the equivalent of ten short blinks. For example, when two long blinks are followed by five short blinks, the MIL is 26 (two long blinks = 20 blinks, plus five short blinks).
- When the ECM stores more than one DTC, the MIL will indicate them by blinking in the order from the lowest number to highest number.

MIL Check

When the ignition switch is turned ON and engine stop switch "○", the MIL will stay on for a few seconds, then go off. If the MIL does not come on, troubleshoot the MIL circuit (page 5-44).

CURRENT DTC/FREEZE DTC

The DTC is indicated in two ways according to the failure status.

- In case the ECM detects the problem at present, the MIL will come on and the MIL will start to blink as its DTC when the sidestand is lowered. It is possible to readout the MIL blink pattern as the current DTC.
- In case the ECM does not detect any problem at present but has a problem stored in its memory, the MIL will not light and blink. If it is necessary to retrieve the past problem, readout the freeze DTC by following the DTC readout procedure (page 5-13).

MCS INFORMATION

- The MCS can read out the DTC, stored data, current data and other ECM condition.

How to connect the MCS

Turn the ignition switch OFF.

Remove the left side cover (page 2-4).

Remove the DLC [1] from the dummy connector [2] on the wire harness.

Connect the MCS to the DLC.

Turn the ignition switch ON with the engine stop switch "○" and check the DTC.

NOTE:

- Stored data indicates the engine conditions when the first malfunction was detected.

DTC READOUT**Current DTC**

Turn the ignition switch ON with the engine stop switch "○" and check the MIL.

Start the engine and check the MIL. If the engine will not start, turn the starter motor for more than 10 seconds and check that the MIL blinks.

If the MIL blinks, connect the MCS to the DLC (page 5-13).

Read the DTC, stored data and follow the DTC index (page 5-15).

- If the MIL does not blink, the system is normal at present. If you wish to read the stored DTC, connect the MCS to the DLC.
- If the MCS is not available, note how many times the MIL blinks and follow the DTC index (page 5-15). If you wish to read the stored DTC, perform the following.
