Comfort,2012-09-25 Almost daily we hear news stories advertisements and scientific reports that promise genetic medicine will make us live longer enable doctors to identify and treat diseases before they start and individualize our medical care But surprisingly a century ago eugenicists were making the same promises The Science of Human Perfection traces the history of the promises of medical genetics and of the medical dimension of eugenics The book also considers social and ethical issues that cast troublesome shadows over these fields divDIV DIVKeeping his focus on America science historian Nathaniel Comfort introduces the community of scientists physicians and public health workers who have contributed to the development of medical genetics from the nineteenth century to today He argues that medical genetics is closely related to eugenics and indeed the two cannot be fully understood separately He also carefully examines how the desire to relieve suffering and to improve ourselves genetically though noble may be subverted History makes clear that as patients and consumers we must take ownership of genetic medicine using it intelligently knowledgeably and skeptically lest pernicious interests trump our own div "And O'er Earth's Troubled, Angry Sea": The History of Christian Science in the United

Cognitive Science and Psychoanalysis

Kenneth Mark Colby, Robert J. Stoller, 2013-12-16 Exploring the connections between cognitive science and psychoanalysis the authors indicate that a potentially fruitful relationship can exist between the two fields The book examines this relationship concluding that psychoanalysis can contribute to a science of the mind when it flows into a more effective science and technology such as cognitive science As viewed by the authors cognitive science is a new lively field full of novel concepts and methods about the mind This is sharply contrasted with their opinion of psychoanalysis as a discipline which must change and consider such important problems in the study of the mind such as fantasies and feelings Colby and Stoller do not specify how psychoanalysis must evolve but they do make suggestions for future research They believe that they are exercising the prerogative of tribal elders passing the task along to the next

The Routledge International Handbook of Life-Course Criminology Arjan Blokland, Victor van der Geest, 2017-03-16 Since its introduction in the latter half of the 1980s the meticulous study of distinct criminal career dimensions like onset frequency and crime mix has yielded a wealth of information on the way crime develops over the life span. Policymakers in turn have used this information in their efforts to tailor criminal justice interventions to be both effective and efficient. Life course criminology studies the ways in which the criminal career is embedded in the totality of the individual life course and seeks to clarify the causal mechanisms governing this process. The Routledge International Handbook of Life Course Criminology provides an authoritative collection of international theoretical and empirical research into the way that criminal behavior develops over the life span which causal mechanisms are involved in shaping this development and to what degree criminal justice interventions are successful in redirecting offenders criminal trajectories. Drawing upon qualitative and quantitative research this handbook covers theory describes and compares criminal career patterns across different countries tests current explanations of criminal development and using cutting edge methods assesses the intended and unintended effects of formal interventions. This book is the first of its kind to offer a comprehensive overview of state of the art developments in criminal career and life course research providing unique perspectives and exclusive local knowledge from over 50 international scholars. This book is an ideal companion for teachers and researchers engaged in the field of developmental and life course criminology.

Infertile Environments Janelle Lamoreaux, 2022-11-18 In *Infertile Environments* Janelle Lamoreaux investigates how epigenetic research into the effects of toxic exposure conceptualizes and configures environments. Drawing on fieldwork in a Nanjing China toxicology lab that studies the influence of pesticides and other pollutants on male reproductive and developmental health Lamoreaux shows how the lab's everyday research practices bring national hormonal dietary maternal and laboratory environments into being. She situates the lab's work within broader Chinese history as well as the contemporary cultural and political moment in which declining fertility rates and reproductive governance and technology are growing concerns.
