objective of the ASI on Advances in High Pressure Studies of Chemical and Biochemical Systems to present the current status of such studies and to emphasize the advances achieved during the nine years since the previous ASI on High Pressure Chemistry. These advances are partly due to the improved instrumentation enabling static and dynamic measurements at pressures several orders of magnitude higher than before and partly due to the more general availability of high pressure equipment. This has led to a remarkable development in various areas of physics and chemistry and especially in biochemistry. Throughout the presentation of this Advanced Study Institute the emphasis fell on the teaching character of such a summer school and the contributions in this volume are of such a nature. Following a general introduction to modern high pressure research a series of chapters on theoretical and experimental studies of gases, fluids and solids at high temperatures and pressures are presented with special emphasis on the physical aspects involved. Instrumentation used in such studies viz shock compression, NMR spectroscopy, laser scattering, x-ray and neutron scattering and vibrational spectroscopy are treated in detail. The subsequent chapters are devoted to the application of high pressure techniques in the broad areas of organic, inorganic and biochemistry. The formal lectures were supplemented by 29 contributed papers for which a list of titles is included.
