Seismic Design and Performance T.G. Sitharam, Raghuveer Rao Palapati, Sreevalsa Kolathayar, 2021-03-26 This volume presents select papers presented at the 7th International Conference on Recent Advances in Geotechnical Earthquake Engineering and Soil Dynamics. The papers discuss advances in the fields of soil dynamics and geotechnical earthquake engineering. Some of the themes include seismic design of deep shallow foundations, soil structure interaction under dynamic loading, marine structures, etc. A strong emphasis is placed on connecting academic research and field practice with many examples, case studies, best practices, and discussions on performance based design. This volume will be of interest to researchers and practicing engineers alike. *Computational Geomechanics and Hydraulic Structures* Sheng-Hong Chen, 2018-06-21 This book presents recent research into developing and applying computational tools to estimate the performance and safety of hydraulic structures from the planning and construction stage to the service period. Based on the results of a close collaboration between the author and his colleagues, friends, students, and field engineers, it shows how to achieve a good correlation between numerical computation and the actual in situ behavior of hydraulic structures. The book's heuristic and visualized style disseminates the philosophy and road map as well as the findings of the research. The chapters reflect the various aspects of the three typical and practical methods: the finite element method, the block element method, the composite element method that the author has been working on and made essential contributions to since the 1980s. This book is an advanced continuation of *Hydraulic Structures* by the same author published by Springer in 2015. **Coupled Thermo-Hydro-Mechanical-Chemical Processes in Geo-systems** Ove Stephansson, John Hudson, Lanru Jing, 2004-11-03 Among the most important and exciting current steps forward in geo engineering is the development of coupled numerical models. They represent the basic physics of geo engineering processes which can include the effects of heat, water, mechanics, and chemistry. Such models provide an integrating focus for the wide range of geo engineering disciplines. The articles within this volume were originally presented at the inaugural GeoProc conference held in Stockholm and contain a collection of unusually high quality information not available elsewhere in an edited and coherent form. This collection not only benefits from the latest theoretical developments but also applies them to a number of practical and wide ranging applications. Examples include the environmental issues around radioactive waste disposal deep in rock and the search for new reserves of oil and gas. **Earthquake Geotechnical Engineering for Protection and Development of Environment and Constructions** Francesco Silvestri, Nicola Moraci, 2019-10-22 *Earthquake Geotechnical Engineering for Protection and Development of Environment and Constructions* contains invited keynote and theme lectures and regular papers presented at the 7th International Conference on Earthquake Geotechnical Engineering, Rome, Italy, 17-20 June 2019. The contributions deal with recent developments and advancements as well as case histories, field monitoring, experimental characterization, physical and analytical modelling, and applications related to the variety of environmental phenomena induced by
