ITIL® Foundation with Case Study

Course Description:

The ITIL® Foundation course is the entry level certification course for IT Service Management Best Practices training in ITIL. This course covers the latest version of core ITIL best practices presented from a lifecycle perspective. The course introduces the principles and core elements of IT service management (ITSM) based on ITIL. ITIL is comprised of five core publications: Service Strategy, Service Design, Service Transition, Service Operations and Continual Service Improvement, promoting alignment with the business as well as improving operational efficiency.

This course is delivered using an exciting case study designed to further enhance and cement the candidates understanding of ITIL. Students who have attended this course are suitably prepared to successfully take the associated ITIL Foundation certification test which is a requirement for attending any of the further learning courses (ITIL intermediate level training) available in this track.

Course and Learning Objectives:

At the end of this course, you will be able to:

Software Quality Assurance Ivan Mistrik, Richard M Soley, Nour Ali, John Grundy, Bedir Tekinerdogan, 2015-10-12. *Software Quality Assurance in Large Scale and Complex Software Intensive Systems* presents novel and high quality research related approaches that relate the quality of software architecture to system requirements, system architecture and enterprise architecture or software testing. Modern software has become complex and adaptable due to the emergence of globalization and new software technologies, devices and networks. These changes challenge both traditional software quality assurance techniques and software engineers to ensure software quality when building today and tomorrow's adaptive context sensitive and highly diverse applications. This edited volume presents state of the art techniques, methodologies, tools, best practices and guidelines for software quality assurance and offers guidance for future software engineering research and practice. Each contributed chapter considers the practical application of the topic through case studies, experiments, empirical validation or systematic comparisons with other approaches already in practice. Topics of interest include but are not limited to: quality attributes of system software architectures, aligning enterprise system and software architecture from the point of view of total quality design decisions and their influence on the quality of system software architecture, methods and processes for evaluating architecture quality, quality assessment of legacy systems and third party applications, lessons learned and empirical validation of theories and frameworks on architectural quality, empirical validation and testing for assessing architecture quality. Focused on quality assurance at all levels of software design and development. Covers domain specific software quality assurance issues e.g. for cloud, mobile, security context sensitive mash up and autonomic systems. Explains likely trade offs from design decisions in the context of complex software system engineering and quality assurance. Includes practical case studies of software quality assurance for complex adaptive and context critical systems.
