HAMMER TYPE

Multi-Impact Spring Hammer

(24, 3000)

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (200 mesh). Based on the proven, spring-type hammer, featuring all their weight concentrated at the point of impact and rotating at high speed, these mills reduce the material with unusual efficiency. Low maintenance, prompt removal of broken plates in the hammer and free passage for the product from bottom of pulverizer is carried out on the material before it reaches the screening grids, thereby increasing wear on the hammers and grids.

These compact, sturdy mills, with hammer bearing housings are made in six sizes to reduce 1/2" to 8" material to the desired particle size in operation. High percentage of fine stock sizes are produced — discharge ports for screening are set to suit requirements. They can be installed either open line or closed for trouble-free, continuous screening without any extra expense.

GYRATORY TYPES

Gyrax — Size 14"

Light Weight but Sturdy
High Efficiency
Low Feed Rate

The Gyrax Fine Reduction Crusher is a lightweight crusher combining proven strength with an unusually high efficiency.

The Traulsen design of ball feed and spread screens fixed in these crushers eliminates setting and grinding between crushing faces.

The construction is uncomplicated and easy to maintain after bearings, and the screens, shaft and gears are all mounted in oil-air bath of circulating pump cooled for a large oil reservoir.

These crushers are suitable for working at extremely fine settings, and by reason of their light weight, low feed rates and low power consumption are particularly adaptable for use with small portable crushing plants and specialized fine crushing applications in process industries.

Can be equipped with either bar or conical driving pulley.

Traulsen 'TY' and 'TZ'

(100, 2000, 3, 7, 9, 10, 12, 14")

Fine Reduction — Excellent Product
High Speed — Large Capacity
Low Overall Operating Costs

These crushers are manufactured under license to the Traulsen Eng. & Mfg. Company of Pittsburgh, Pa., U.S.A. Type 'TY' and 'TZ' crushers are compact machines combining both fine screen and ball screen feeds and screen surfaces to insure thorough, rapid efficiency and very minimum wear between the faces — all cast heavy, self-aligning, ball feed and spread screens or all-cast ball feed discharge without discharge and a self-aligning mechanism internally fixed with roller bearings.

The same capacity and efficiency of Traulsen Gyration Crushers is due to the advanced design of the ball feed and spread screens.

Crushing is assisted by increasing the capacity of each crushing feeding zone — power requirements are reduced, even at fine settings for producing a grade just below the desired condition in a closed crushing flow. The minimum clearance between material and crushing surfaces greatly increases the life of these parts. Ideal for secondary and tertiary crushing operations.

ROLL TYPE

Double Crushing Roll

(Construction and Size to Suit Application)

Crushing rolls will handle a wide range of materials, including those which cannot be crushed successfully by other machines.

The product from crushing rolls is generally intermediate in size between that of the reduction crusher and grinding mills.

The spacing capacity of rolls being broken, they should be selected of ample diameter to produce the largest material in the feed.

Rolls have wide face for crushing rolls for combining capacity of screen capacity. Rolls are usually set flat or conical plates mounted on heavy cast shafts.

Roll shafts can be cast in composition steel, chrome steel or drilled bar, or may be other suitable hard, composed or welded, according to the service required.

Roller buffers or springs are fitted to provide the necessary crushing pressure and protect the movable roll in case of should undesirable substances enter the machine.

Feeding Equipment

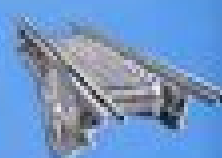

PLATE APRON TYPE

PAN TYPE

(10" to 48" wide — capacity as required)

(10" to 48" wide — capacity as required)

These feeders are manufactured with frames of the heaviest steel, and have double-ribbed steel wear parts of 1/2" or 3/4" thick plate mounted on multiple groups of bearings, roller skates. The chain rollers mount on flat tracks incorporated in the mounted steel frame work, and are arranged to support the feed uniformly for the full length of the feeder. In a subsequent apron assembly, deflection of the pans due to impact of heavy large lumps, rolls on the apron surface between the chain wheels is to the maximum full depth of underdrift of pans.

Can be equipped with either constant speed driving gear with electric motor drive, or hydraulic transmission equipment with hand control to give infinite speed variation between the limits of slow and maximum.
