community **Handbook of Formative Assessment** Heidi Andrade, Gregory J. Cizek, 2010-04-02 The Handbook of Formative Assessment comprehensively profiles this burgeoning field of study Written by leading international scholars and practitioners each chapter discusses key issues in formative assessment policy and practice Making Sense of Word Problems Eric de Corte, Brian Greer, Lieven Verschaffel, 2000-01-01 Word problems have been a staple of mathematics instruction for centuries yet the rationale for their use has remained largely unexamined A range of findings have shown how students consistently answer them in ways that fail to take account of the reality of the situations described This monograph reports on studies carried out to investigate this suspension of sense making in answering word problems In Part One a wide range of examples documenting the strength of the phenomenon is reviewed Initial surprise at the findings was replaced by a conviction that the explanation lies in the culture of the mathematics classroom specifically the rules implicitly governing the nature and interpretation of the word problem genre This theoretical shift is reflected in Part Two A detailed analysis of the way in which word problems are currently taught in typical mathematical classrooms is followed by reviews of design experiments illustrating how by immersing students in a fundamentally changed learning environment they can acquire what the authors consider to be more appropriate conceptions about and strategies for doing word problems Part Three turns to a wider discussion of theoretical issues a further analysis of the features of the educational system considered responsible for outcomes detrimental to many students understanding and conception of mathematics and suggestions for rethinking the role of word problems within the curriculum Statistical Analysis of Proteomics, Metabolomics, and Lipidomics Data Using Mass Spectrometry Susmita Datta, Bart J. A. Mertens, 2016-12-15 This book presents an overview of computational and statistical design and analysis of mass spectrometry based proteomics metabolomics and lipidomics data This contributed volume provides an introduction to the special aspects of statistical design and analysis with mass spectrometry data for the new omic sciences The text discusses common aspects of design and analysis between and across all or most forms of mass spectrometry while also providing special examples of application with the most common forms of mass spectrometry Also covered are applications of computational mass spectrometry not only in clinical study but also in the interpretation of omics data in plant biology studies Omics research fields are expected to revolutionize biomolecular research by the ability to simultaneously profile many compounds within either patient blood urine tissue or other biological samples Mass spectrometry is one of the key analytical techniques used in these new omic sciences Liquid chromatography mass spectrometry time of flight data and Fourier transform mass spectrometry are but a selection of the measurement platforms available to the modern analyst Thus in practical proteomics or metabolomics researchers will not only be confronted with new high dimensional data types as opposed to the familiar data structures in more classical genomics but also with great variation between distinct types of mass spectral measurements derived from different platforms which may complicate analyses comparison and interpretation of results
