MEASURES OF CENTRAL TENDENCY

-To describe a whole set of data with a single value that represents the middle or centre of its distribution is the purpose of measure of central tendency (measures of centre or central location).

-To put in other words, it is a way to describe the center of a data set.

-It lets us know what is normal or 'average' for a set of data.

-It also condenses the data set down to one representative value, which is useful when you are working with large amounts of data

MEAN

-The mean by definition is the sum of all the values in the observation or a dataset divided by the total number of observations. This is also known as the arithmetic average.

-The mean can be used for both continuous and discrete numeric data as well as for categorical data, as the values cannot be summed.

-As the mean includes every value in the distribution

Example: A teacher wants to know the average score of a class of 20 students on a test. The scores are: 85, 78, 92, 65, 88, 70, 80, 75, 82, 73, 87, 76, 84, 79, 81, 77, 83, 74, 86, 72. To find the mean, the teacher adds all the scores and divides by the number of students (20). The mean score is 79.5.
