Optimizing Outcomes for Children With Immune-Mediated Chronic Kidney Disease Lovro Lamot,Susa Benseler,Lorraine A. Hamiwka,Thomas Renson,Evelien Snauwaert,2024-12-13 Immune mediated systemic diseases in children are a heterogeneous group of mostly rare disorders affecting several organs These diseases can be autoinflammatory with a major pathophysiological role for inflammasomes or autoimmune often characterized by the presence of autoantibodies produced by B cells and the involvement of autoreactive T cells The clinical presentation of these diseases is highly variable In many immune mediated systemic diseases renal involvement is an important contributor to morbidity and mortality Acute kidney inflammation may lead to chronic renal changes resulting in severe chronic kidney disease and ultimately end stage renal disease There are several unmet needs regarding kidney involvement in immune mediated systemic diseases First renal biopsy and histopathologic assessment are still the gold standards for diagnosis and prognostic evaluation of renal involvement There is a need for easy applicable validated non invasive biomarkers Second blood based and or urinary biomarkers differentiating disease relapse from transplant rejection are lacking in patients who underwent renal transplantation Third the long term prognosis of chronic kidney disease in children is often unfavorable with a substantial risk of developing end stage renal disease warranting kidney dialysis and or transplantation More targeted treatment options are needed reducing the burden of broad immunosuppressive and cytotoxic agents and optimizing patient outcomes Finally notwithstanding many studies are initiated involving adult subjects research in children with immune mediated chronic kidney disease is scarce There is an unmet need for trials involving this neglected patient population
