Dimensional Analysis In The Identification Of Mathematical Models Lysik Bertold,Waclaw Kasprzak,Marek Rybaczuk,1990-09-12 This book is the first textbook with the generalization of Dimensional Analysis specially prepared to solve problems of identification of mathematical models based on experimental data The generalization gives the possibility of mathematical model invariant with regard to gauge group groups of rotation and others The resulting formalism generates the most general and tensor homogeneous form of possible functional dependence *Mathematical Models and Methods* ,1983 **Models to Illustrate the Foundations of Mathematics** C. Elliott,1914 Mathematical Models Henry Martyn Cundy,1954 Mathematical Models and Their Analysis Frederick Y. M. Wan,2018-03-20 A great deal can be learned through modeling and mathematical analysis about real life phenomena even before numerical simulations are used to accurately portray the specific configuration of a situation Scientific computing also becomes more effective and efficient if it is preceded by some preliminary analysis These important advantages of mathematical modeling are demonstrated by models of historical importance in an easily understandable way The organization of Mathematical Models and Their Analysis groups models by the issues that need to be addressed about the phenomena The new approach shows how mathematics effective for one modeled phenomenon can be used to analyze another unrelated problem For instance the mathematics of differential equations useful in understanding the classical physics of planetary models fluid motion and heat conduction is also applicable to the seemingly unrelated phenomena of traffic flow and congestion offshore sovereignty and regulation of overfishing and deforestation The formulation and in depth analysis of these and other models on modern social issues such as the management of exhaustible and renewable resources in response to consumption demands and economic growth are of increasing concern to students and researchers of our time The modeling of current social issues typically starts with a simple but meaningful model that may not capture all the important elements of the phenomenon Predictions extracted from such a model may be informative but not compatible with all known observations so the model may require improvements The cycle of model formulation analysis interpretation and assessment is made explicit for the modeler to repeat until a model is validated by consistency with all known facts
