**The Colorado Mathematical Olympiad: The Third Decade and Further Explorations** Alexander Soifer, 2017-04-27 Now in its third decade the Colorado Mathematical Olympiad CMO founded by the author has become an annual state wide competition hosting many hundreds of middle and high school contestants each year This book presents a year by year history of the CMO from 2004 2013 with all the problems from the competitions and their solutions Additionally the book includes 10 further explorations bridges from solved Olympiad problems to real mathematics bringing young readers to the forefront of various fields of mathematics This book contains more than just problems solutions and event statistics it tells a compelling story involving the lives of those who have been part of the Olympiad their reminiscences of the past and successes of the present I am almost speechless facing the ingenuity and inventiveness demonstrated in the problems proposed in the third decade of these Olympics However equally impressive is the drive and persistence of the originator and living soul of them It is hard for me to imagine the enthusiasm and commitment needed to work singlehandedly on such an endeavor over several decades Branko Grünbaum University of Washington

After decades of hunting for Olympiad problems and struggling to create Olympiad problems he has become an extraordinary connoisseur and creator of Olympiad problems The Olympiad problems were very good from the beginning but in the third decade the problems have become extraordinarily good Every brace of 5 problems is a work of art The harder individual problems range in quality from brilliant to work of genius The same goes for the Further Explorations part of the book Great mathematics and mathematical questions are immersed in a sauce of fascinating anecdote and reminiscence If you could have only one book to enjoy while stranded on a desert island this would be a good choice

Like Gauss Alexander Soifer would not hesitate to inject Eureka at the right moment Like van der Waerden he can transform a dispassionate exercise in logic into a compelling account of sudden insights and ultimate triumph

Cecil Rousseau Chair USA Mathematical Olympiad Committee

A delightful feature of the book is that in the second part more related problems are discussed Some of them are still unsolved

Paul Erdős

The book is a gold mine of brilliant reasoning with special emphasis on the power and beauty of coloring proofs Strongly recommended to both serious and recreational

mathematicians on all levels of expertise

**Discrete Mathematics and Symmetry** Angel Garrido, 2020-03-05 Some of the most beautiful studies in Mathematics are related to Symmetry and Geometry For this reason we select here some contributions about such aspects and Discrete Geometry As we know Symmetry in a system means invariance of its elements under conditions of transformations When we consider network structures symmetry means invariance of adjacency of nodes under the permutations of node set The graph isomorphism is an equivalence relation on the

set of graphs Therefore it partitions the class of all graphs into equivalence classes The underlying idea of isomorphism is that some objects have the same structure if we omit the individual character of their components A set of graphs isomorphic to each other is denominated as an isomorphism class of graphs The automorphism of a graph will be an isomorphism from  $G$  onto itself The family of all automorphisms of a graph  $G$  is a permutation group

**Distance Learning, E-Learning and Blended Learning in Mathematics Education** Jason Silverman, Veronica Hoyos, 2018-07-20 This book builds on current and emerging research in distance learning e learning and blended learning Specifically it tests the boundaries of what is known by examining and discussing recent research and development in teaching and learning based on these modalities with a focus on lifelong mathematics learning and teaching The book is organized in four sections The first section focuses on the incorporation of new technologies into mathematics classrooms through the construction or use of digital teaching and learning platforms The second section presents a wide range of perspectives on the study and implementation of different tutoring systems and or computer assisted math instruction The third section presents four new innovations in mathematics learning and or mathematics teacher education that involve the development of novel interfaces for communicating mathematical ideas and analyzing student thinking and student work Finally the fourth section presents the latest work on the construction and implementation of new MOOCs and rich media platforms developed to carry out specialized mathematics teacher education
