Clawson,2014-01-15 **The History of Mathematics** Anne Rooney,2012-07-15 Mathematics has come a long way throughout its history Readers are offered a peek into a world that is too often unseen that being the painstaking development of mathematical principals that serve as the blueprint of our universe Readers will learn about how mathematics plays an integral role in our understanding of concepts as vast as black holes to those as ordinary today as the common GPS device **A History of Mathematics** Florian Cajori,2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1919 edition Excerpt THE MAYA The Maya of Central America and Southern Mexico developed hieroglyphic writing as found in inscriptions and codices dating apparently from about the beginning of the Christian era that ranks probably as the foremost intellectual achievement of pre Columbian times in the New World Maya number systems and chronology are remarkable for the extent of their early development Perhaps five or six centuries before the Hindus gave a systematic exposition of their decimal number system with its zero and principle of local value the Maya in the flatlands of Central America had evolved systematically a vigesimal number system employing a zero and the principle of local value In the Maya number system found in the codices the ratio of increase of successive units was not 10 as in the Hindu system it was 20 in all positions except the third That is 20 units of the lowest order kins or days make one unit of the next higher order uinals or 20 days 18 uinals make one unit of the third order tun or 360 days 20 tuns make one unit of the fourth order katun or 7200 days 20 katuns make one unit of the fifth order cycle or 144 000 days and finally 20 cycles make 1 great cycle of 2 880 000 days In Maya codices we find symbols for 1 to 19 expressed by bars and dots Each bar stands for 5 units each dot for 1 unit For instance 12 4 5 7 19 The zero is represented by a symbol that looks roughly like a halfclosed eye In writing 20 the principle of local value enters It is expressed by a dot placed over the symbol for zero The numbers are written vertically the lowest order being assigned the lowest position Accordingly 37 was expressed by the symbols for 17 three bars and two dots in the kin place and one

Secret Lives of Numbers Alfred S. Posamentier,2022-07-01 We see numbers on automobile license plates addresses weather reports and of course on our smartphones Yet we look at these numbers for their role as descriptors not as an entity in and unto themselves Each number has its own history of meaning usage and connotation in the larger world The Secret Lives of Numbers takes readers on a journey through integers considering their numerological assignments as well as their significance beyond mathematics and in the realm of popular culture Of course we all know that the number 13 carries a certain value of unluckiness with it The phobia of the number is called Triskaidekaphobia Franklin Delano Roosevelt was known to invite and disinvite guests to parties to avoid having 13 people in attendance high rise buildings often skip the 13th floor out of superstition There are many explanations as to how the number 13 received this negative honor but from a mathematical point of view the number 13 is also the smallest prime number that when its digits are reversed is also a prime

number It is honored with a place among the Fibonacci numbers and integral Pythagorean triples as well as many other interesting and lesser known occurrences In *The Secret Lives of Numbers* popular mathematician Alfred S Posamentier provides short and engaging mini biographies of more than 100 numbers starting with 1 and featuring some especially interesting numbers like 6 174 a number with most unusual properties to provide readers with a more comprehensive picture of the lives of numbers both mathematically and socially

A History of Elementary Mathematics; with Hints on Methods of Teaching Florian Cajori, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1917 edition Excerpt moments are therefore represented by the first of the two following series approximately 0 1 2 3 v The second series represents at the end of corresponding intervals of time very nearly the distances of D from A According to Napier the numbers in the lower series are approximately the logarithms of the corresponding numbers in the upper series Now observe that the lower series is an arithmetical progression and the upper a geometrical progression It is here that Napier's discovery comes in touch with the work of previous investigators like Archimedes and Stifel it is here that the continuity between the old and the new exists The relation between numbers and their logarithms which is indicated by the above series is found of course in the logarithms now in general use The numbers in the geometric series 1 10 100 1000 have for their common logarithms to the base 10 the numbers in the arithmetic series 0 1 2 3 But observe one very remarkable peculiarity of Napier's logarithms they increase as the numbers themselves decrease and numbers exceeding v have negative logarithms More over zero is the logarithm not of unity as in modern logarithms but of v which was taken by Napier equal to 107 Napier calculated the logarithms not of successive integral numbers from 1 upwards but of sines His aim was to simplify trigonometric computations The line AE was the sine of 90° i e of the radius and was taken equal to 107 units BE GE DE were sines of arcs and A B A C A D their respective logarithms It is evident from what has been said that the logarithms of Napier are not the same as the natural logarithms to the base e 2 718 This difference must be emphasized because it is not
