Questions What do you think of Sidney's description of his trip?

Heat vs Temperature

Heat is a transfer of energy between two objects. However, they do not have the same thing. Heat is a form of energy which always moves from a hot area to a cooler area. Temperature is a measurement of how hot or cold something is. It is not a form of energy, only temperature is a measure of energy.

Heat

When we think of heat, we should think of the movement of particles. When we put a cup of water in a container, the heat energy from the container goes into the water and it starts to move. The heat also transfers from the water into the container walls. Heat energy is always being transferred from the water into the container walls.

Temperature

When we put a cup of water in the stove, the heat energy from the stove makes the water to heat up. Temperature is not transferred from the stove to the water. It is the heat that transfers from the stove to the water. The temperature of the water is not transferred from the stove to the water. The temperature of the water is not transferred from the stove to the water.
