Domestic Homicide Marieke Liem, Frans Koenraadt, 2018-03-19. The literature on domestic violence will often treat homicide as its most extreme outcome. The reality is more nuanced, with many domestic homicides occurring within a history of abusive behaviour. This book offers a much needed synthesis of the literature on domestic homicide, covering its history, the theories supporting it, its various forms such as filicide, intimate partner homicide, parricide, siblicide and familicide, and its prevention. The authors explore the predominant theories that have been used to explain domestic homicides in general, as well as specific subtypes of domestic homicide. Each chapter then takes a chronological approach in examining relationships between victim and perpetrator in the most prominent types of domestic homicide. Drawing on the empirical evidence, it offers a unique insight into the dynamics of domestic homicides and debunks some of the common stereotypes surrounding it. The book concludes with an overview of the main areas of prevention of domestic homicide and offers recommendations for professionals working in domestic violence services, medical practitioners and mental health services. This book will be of interest to criminologists, psychiatrists, psychologists and sociologists alike and will be key reading for a range of courses on violence, abuse and aggression.

Understanding Postpartum Psychosis Teresa M. Twomey, 2009-03-20. Offering an understanding of postpartum psychosis, this riveting book explains what happens and why during this temporary and dangerous disorder that develops for some women rapidly after childbirth. Most of us are familiar with the baby blues, a passing sadness that strikes 50 to 75 percent of new mothers after delivery. And most of us understand postpartum depression, a sadness post-delivery that lingers for weeks or months for an estimated one in every 10 new mothers. But a more serious form of disorder that strikes up to one in every 500 is postpartum psychosis, triggering severe agitation, confusion, insomnia, hallucinations, delusions, mania and possible thoughts of suicide or murder. Every year, women in the United States and around the world kill their babies, children and themselves as a result of this mental illness. Here, author Twomey, an official with Postpartum Support International, gives us insight into the psychological, personal, medical, legal and historical perspectives on this little understood mental illness, which is both preventable and treatable. While most women who suffer postpartum psychosis eventually recover without harming anyone, they most often do so in silence. Paranoia is a common symptom, explains Twomey, and that moves women to

hide their symptoms from everyone around them The woman can hence appear normal but be putting both herself and her baby at risk We can prevent and treat this but we need to recognize it by better screening of women postpartum says Twomey

Murder, Medicine and Motherhood Emma Cunliffe,2011-05-27 Since the early 1990s unexplained infant death has been reformulated as a criminal justice problem within many western societies This shift has produced wrongful convictions in more than one jurisdiction This book uses a detailed case study of the murder trial and appeals of Kathleen Folbigg to examine the pragmatics of proof beyond a reasonable doubt It explores how legal process medical knowledge and expectations of motherhood work together when a mother is charged with killing infants who have died in mysterious circumstances The author argues that Folbigg who remains in prison was wrongly convicted The book also employs Folbigg s trial and appeals to consider what lessons courts have learned from prior wrongful convictions such as those of Sally Clark and Angela Cannings The author s research demonstrates that the Folbigg court was misled about the state of medical knowledge regarding infant death and that the case proceeded on the incorrect assumption that behavioural and scientific evidence provided independent proofs of guilt Individual chapters critically assess the relationships between medical research and expert testimony the operation of unexamined cultural assumptions about good mothering and the manner in which contested cases are reported by the press as overwhelming
