Information Processing Underlying Gaze Control:

Information Processing Underlying Gaze Control J. M. Delgado-García, E. Godaux, P.-P. Vidal, 2018-04-19 Information Processing Underlying Gaze Control covers the proceedings of the Satellite Workshop to the 16th European Neuroscience Association. The book presents materials concerning the computational properties of neuronal circuits underlying gaze control. The book contains 44 papers which are organized into seven sections. The first section deals with the morphology and physiology of extraocular motor nuclei. Section II tackles the anatomofunctional organization of the saccadic system and Section III covers the vestibular and otolith systems. Section IV discusses the optokinetic and smooth pursuit systems while Section V talks about other sensory systems involved in the control of oculomotor function. Section VI covers the role of cerebellum in the genesis and control of eye movements and Section VII tackles the coordination of eye, head and body movements. The text will be of great use to researchers who have an interest in gaze control. *Perceiving in Depth, Volume 1: Basic Mechanisms* Ian P. Howard, 2012-01-27 The three volume work *Perceiving in Depth* is a sequel to *Binocular Vision and Stereopsis* and to *Seeing in Depth* both by Ian P. Howard and Brian J. Rogers. This work is much broader in scope than the previous books and includes mechanisms of depth perception by all senses including aural electrosensory organs and the somatosensory system. Volume 1 reviews sensory coding, psychophysical and analytic procedures and basic visual mechanisms. Volume 2 reviews stereoscopic vision. Volume 3 reviews all mechanisms of depth perception other than stereoscopic vision. The three volumes are extensively illustrated and referenced and provide the most detailed review of all aspects of perceiving the three dimensional world. Volume 1 starts with a review of the history of visual science from the ancient Greeks to the early 20th century with special attention devoted to the discovery of the principles of perspective and stereoscopic vision. The first chapter also contains an account of early visual display systems such as panoramas and peepshows and the development of stereoscopes and stereophotography. A chapter on the psychophysical and analytic procedures used in investigations of depth perception is followed by a chapter on sensory coding and the geometry of visual space. An account of the structure and physiology of the primate visual system proceeds from the eye through the LGN to the visual cortex and higher visual centers. This is followed by a review of the evolution of visual systems and of the development of the mammalian visual system in the embryonic and postnatal periods with an emphasis on experience dependent neural plasticity. An account of the development of perceptual functions especially depth perception is followed by a review of the effects of early visual deprivation during the critical period of neural plasticity on amblyopia and other defects in depth perception. Volume 1 ends with accounts of the accommodation mechanism of the human eye and vergence eye movements.

Current Oculomotor Research Wolfgang Becker, Heiner Deubel, Thomas Mergner, 2013-11-09 This volume contains the proceedings of the Ninth European Conference on Eye Movements (ECM 9) held in Ulm, Germany on September 23-26, 1997. ECM 9 continued a series of conferences initiated by Rudolf Groner of Bern, Switzerland in 1981 which from its very

beginning has brought together scientists from very diverse fields with a common interest in eye movements About 40 of the papers presented at ECEM 9 have been selected for presentation in full length while others are rendered in condensed form There is a broad spectrum of motives why people have become involved in and fascinated by eye movement research Neuroscientists have been allured by the prospect of understanding anatomical findings single unit recordings and the sequels of experimental lesions in terms of the clearly defined system requirements and the well documented behavioural repertoire of the oculomotor system Others have been attracted by the richness of this repertoire and its dependence on an intricate hierarchy of factors spanning from simple reflexes to visual pattern recognition and spatio temporal prediction Neurologists neuro ophthalmologists and neuro otologists have long standing experience with eye movements as sensitive indicators of lesions in the brain stem the midbrain and the cerebellum By studying oculomotor malfunctions they have made and are continuing to make important contributions to our understanding of oculomotor functions

Three-dimensional Kinematics of the Eye, Head and Limb Movements M Fetter, T Haslwanter, H Misslich, D Tweed, 1997-09-09 The 19th century pioneers of motor physiology Helmholtz Hering Fick and others used the mathematics of motion known as kinematics to describe the laws of human movement and to deduce the neural control principles underlying these laws After long neglect partly due to limitations in stimulation and recording techniques the kinematic approach is now resurging fortified with modern computers and electrophysiology New developments in recording techniques as well as an improved understanding of the complex control properties of three dimensional movements have led to a flood of new research in this area The classical laws of Donders and Listing have been confirmed and generalized and computer simulations of the neural control of three dimensional movement have been developed and tested In this book some of the world's leading scientists of motor control discuss how the brain represents and transforms the kinematic variables of movement Background chapters explain the basic concepts non commutativity redundancy and the classical laws and their application to normal function and motor disorders and shorter articles describe current research The contributions are based on presentations at a symposium held in Tübingen in August 1995 The wide scope of the book should enable researchers to gain an overview of current research but should also help newcomers to the field to get a good understanding of the questions and problems involved in three dimensional movement control

Neural Control of Space Coding and Action Production C. Prablanc, D. Pélisson, Y. Rossetti, 2003-02-28 Clinical neuropsychology has evolved by integrating in its field the knowledge derived from neuroanatomical electrophysiological and psychophysical data and has led to the development of rehabilitation tools This volume tries to link the new concepts and discoveries in the field of sensorimotor coordination It contains the main contributions of participants of an international symposium held in Lyon in 2001 entitled Neural control of space coding and action production The book emphasizes the reciprocal relationship between perception and action and the essential role of active sensorimotor organization or reorganization in building up perceptual and motor representations of the self and of the

external world Motor Learning and Synaptic Plasticity in the Cerebellum Paul J. Cordo, Curtis Calvin Bell, Stevan R. Harnad, 1997-11-28 This book is concerned with the involvement of the cerebellum in learning and remembering motor tasks It is unique in discussing plasticity at both the cellular and at the behavioral level **Three-dimensional Kinematics of the Eye, Head and Limb Movements** M Fetter, T Haslwanter, H Misslich, D Tweed, 2020-02-19 The 19th century pioneers of motor physiology Helmholtz Hering Fick and others used the mathematics of motion known as kinematics to describe the laws of human movement and to deduce the neural control principles underlying these laws After long neglect partly due to limitations in stimulation and recording techniques the kinematic approach is now resurging fortified with modern computers and electrophysiology New developments in recording techniques as well as an improved understanding of the complex control properties of three dimensional movements have led to a flood of new research in this area The classical laws of Donders and Listing have been confirmed and generalized and computer simulations of the neural control of three dimensional movement have been developed and tested In this book some of the world s leading scientists of motor control discuss how the brain represents and transforms the kinematic variables of movement Background chapters explain the basic concepts non commutativity redundancy and the classical laws and their application to normal function and motor disorders and shorter articles describe current research The contributions are based on presentations at a symposium held in Tübingen in August 1995 The wide scope of the book should enable researchers to gain an overview of current research but should also help newcomers to the field to get a good understanding of the questions and problems involved in three dimensional movement control *The Acquisition of Motor Behavior in Vertebrates* James R. Bloedel, Timothy J. Ebner, Steven P. Wise, 1996 Our motor skills determine how well we perform in athletics dance music and in carrying out countless daily chores While our proficiency at performing individual actions and synthesizing them into seamless sequences limits our athletic and artistic talents we are not perpetually bound by such limitations The nervous system can acquire new and modify old motor behaviors through experience and practice That is motor learning The Acquisition of Motor Behavior in Vertebrates provides a broad multidisciplinary survey of recent research on the brain systems and mechanisms underlying motor learning Following the editors introduction nineteen contributions report on the neurobiology of these higher brain functions and on diverse types of motor learning such as reflex adaptation conditioned and instrumental reflex learning visually guided actions and complex sequences and skills *Neurochemistry of the Vestibular System* Alvin J. depends on the learning and developmental history of the performer It begins by reviewing the works of R S Woodworth and the influence of his theories on current research The majority of the chapters in the first section of the book take a behavioral and process oriented approach to exploring goal directed movement The text then explores the sensory and neural foundations for goal directed action including issues related to both pursuit and saccadic eye movements as well as discussion of the specialization of various cortical systems for the regulation of movement Especially relevant to professionals and scientists concerned with skill instruction and rehabilitation the final part of the text provides a review of recent research on how and why limb control changes occur with practice and development In addition Vision and Goal Directed Movement considers how the research presented can maximize precision efficiency and safety in workspace design Vision and Goal Directed Movement Neurobehavioral Perspectives adds a unique offering to the literature base for motor behavior demonstrating how advances in both behavioral and neurophysiological methods can inform theories related to the biological systems contributing to skilled performance

Vision and Action Laurence R. Harris, Laurence Harris, Michael Jenkin, 1998-10-13 This book is about the two way interplay between vision and action Vision acts to guide and control actions But vision also obtains a lot of information about the world by virtue of these actions for example by moving round an object to obtain successive views This becomes a reiterative process and it is this that is the focus of this volume This book contains contributions from scientists who are leaders in each of the several facets of the subject Examples of the types of action considered vary from moving the eyes and head and body as in looking around or walking to complex actions such as driving a car or playing table tennis

Tissues and Organs G. A. Chauvet, 2013-09-11 Theoretical Systems in Biology Hierarchical and Functional Integration Volume II Tissues and Organs discusses the phenomenology of physiological mechanisms The book is comprised 10 chapters that are organized into two parts The first part covers topics about the cell and its environment such as cell membrane structure mechanisms of membrane transport and cell excitability The second part deals with the mechanisms of physiological functions which include the metabolic system the respiratory system and the renal system The book will be of great use to researchers and professionals whose work requires a good understanding of human physiology
