Virtual America John Opie, 2008-01-01 Virtual America traces the complex relationship between Americans technology and their environment as it has unfolded over the past several centuries Throughout history Americans have constructed mental pictures of unique places such as the American West that have taken on more authority than the actual gritty landscapes This disconnect from reality is magnified by the new world of virtual realities on the computer screen where personal immersion in interactive simulations becomes the default environment Virtual America identifies the connections or lack thereof between our individual selves an American identity and the geography out there John Opie examines what he calls First Nature the natural world Second Nature metropolitan infrastructure built environment and Third Nature virtual reality in cyberspace He also explores how Americans have historically dreamed about a better life in daily ordinary existence and then fulfilled it through the Engineered America of our built environment the Consumer America of material well being and the Triumphal America of our conviction that we are the world's exceptional model But these dream worlds have also encouraged placelessness and thus indifference to our dwelling in home ground Finally Opie explores Last Nature a sense of place and argues that when we identify an authentic place we can locate authenticity of self a reification of place and self by their connectedness **The Surprising Design of Market Economies** Alex

Marshall, 2012-09-01 The free market has been a hot topic of debate for decades Proponents tout it as a cure all for just about everything that ails modern society while opponents blame it for the very same ills But the heated rhetoric obscures one very

important indeed fundamental fact markets don't just run themselves we create them Starting from this surprisingly simple yet often ignored or misunderstood fact Alex Marshall takes us on a fascinating tour of the fundamentals that shape markets and through them our daily economic lives He debunks the myth of the free market showing how markets could not exist without governments to create the structures through which we assert ownership of property real and intellectual and conduct business of all kinds Marshall also takes a wide ranging look at many other structures that make markets possible including physical infrastructure ranging from roads and railroads to water systems and power lines mental and cultural structures such as common languages and bodies of knowledge and the international structures that allow goods services cash bytes and bits to flow freely around the globe Sure to stimulate a lively public conversation about the design of markets this broadly accessible overview of how a market economy is constructed will help us create markets that are fairer more prosperous more creative and more beautiful
