Heat How To Stop The Planet From Burning:

Heat George Monbiot, 2009-03-19 George Monbiot's *Heat How to Stop the Planet from Burning* marks an important moment in our civilization's thinking about global warming. The question is no longer whether climate change is actually happening. The question is what to do about it. Monbiot offers an ambitious and far-reaching program to cut our carbon dioxide emissions to the point where the environmental scales start tipping away from catastrophe. But not before he devotes a chapter to unmasking the vested interests that have spent fortunes funding the specious science of the climate change deniers. It now seems certain that we need a 90% cut in our emissions by 2030 to prevent runaway climate change from taking place. For the first time this book explains how the cut could be achieved without bringing industrial civilisation to an end. Combining his unique knowledge of political campaigning and environmental science, Monbiot analyses the potential of energy efficiency, renewable resources, carbon burial, nuclear power, and new transport and building systems to discover what works, what doesn't, what costs the least, and what needs to be done to make change happen. He is not afraid to attack anyone, friend or foe, whose claims are false or whose figures have been fudged. His original, sometimes shocking programme shows that we can reconcile our demands for comfort and security with the survival of the biosphere. Rigorous, passionate, and totally surprising, this book could change the world. It is possible to slow the momentum of this global crisis if we act decisively. In this riveting, fiery book, the No Logo of the environmental movement, George Monbiot shows us how.

Heat George Monbiot, 2007 A brilliant and terrifying book that forces us to move beyond denial and into action. **Heat** George Monbiot, 2006 **Rationing Earth** Herb Bentz, Our economy has spiralled out of control with too much focus on the quantity of production. The way to reduce this wasteful overproduction of goods and services is to increase their quality. In this groundbreaking book, industrial designer Herb Bentz explains how to fix the economy and break the environment versus economy deadlock. Bentz tells us how the use of good design can improve the quality of what we produce and how a beneficial growth in quality can substitute for the destructive increase in quantity. Tying together many diverse aspects of the economy, economic growth, unemployment, the welfare state, and the need to ration, *Rationing Earth* provides a critical analysis and a way forward at this crucial moment. Despite high wealth in rich countries, there is still poverty and inadequate funding for social programs. This unjustified austerity has resulted in a persistence of economic insecurity, the proliferation of poor quality products, and inadequate action on environmental problems. Bentz provides an economic solution from a designer's perspective. By using elements of design thinking to achieve an overarching synthesis of the world's challenging problems, including effectiveness of government, the opposing demands of capital and labour, positive and negative effects of technology, and the absolute boundaries of a finite earth, he presents practical solutions to the conflicting needs for economic growth, full employment, and reduced consumption. In each of these areas, *Rationing Earth* addresses the toughest questions: How will we adapt to less economic growth? How do we solve unemployment? What is the proper role of government? And how can we

create an economy that effectively rations scarce resources without reducing prosperity Bentz blends an entertaining style with a concise but broad analysis that is provocative informative and pertinent to anyone interested in economic change that has a positive impact on the environment

William H. Calvin,2010-08-09 A Reef in Time J.E.N. Veron,2008-01-31 Like many coral specialists fifteen years ago Veron thought Australia's Great Barrier Reef was impervious to climate change Then he saw for himself the devastation that elevated sea temperatures can inflict on corals **Climate Change and Future Justice** Catriona McKinnon,2012-03-12

Climate change creates unprecedented problems of intergenerational justice What do members of the current generation owe to future generations in virtue of the contribution they are making to climate change Providing important new insights within the theoretical framework of political liberalism Climate Change and Future Justice presents arguments in three key areas Mitigation the current generation ought to adopt a strong precautionary principle in formulating climate change policy in order to minimise the risks of serious harm from climate change imposed on future generations Adaptation the current generation ought to create a fund to which members of future generations may apply for compensation if the risks of climate change harm imposed on them by the current generation ripen into harms Triage future generations ought to keep alive hope for a return to the framework of justice for the social cooperation of future people less burdened by climate change harms This work presents agenda setting applications of important principles of democratic equality to the most serious set of political challenges ever faced by human society It should be required reading for political theorists and environmental philosophers Global Warming and the Political Ecology of Health Hans Baer,Merrill Singer,2016-09-17 In this

traditional concept of disease to examine changes in subsistence and settlement patterns land use and lifeways throwing the sociopolitical and economic dimensions of climate change into stark relief Revealing the systemic structures of inequality underlying global warming they also issue a call to action arguing that fundamental changes in the world system are essential to the mitigation of an array of emerging health crises link to anthropogenic climate and environmental change

The Zero-Carbon House Martin Godfrey Cook,2011-09-16 Zero Carbon is an abstract concept for most people but we have lived energy profligate lifestyles for too long on finite fossil fuel resources We now face potential environmental catastrophe from climate change and global warming with a continuing exponentially expanding global population that doubles every four decades The capacity of the planet to reabsorb carbon dioxide is about two to three tonnes of carbon equivalent per person at current population levels of seven billion and therefore there is a desperate need for us to reduce our carbon footprint A way of helping to achieve this is to live in a zero carbon house and this will become UK legislation for new homes by 2016 This fascinating book covers all aspects of the zero carbon house from its evolution to achieving carbon neutrality in old and new homes as well as entire communities Includes an overview of zero carbon and how to achieve it on a global scale covers communities of zero carbon houses and provides inspirational examples of low carbon lifestyles Case studies show how principles are put into successful practice to save energy carbon money and the environment

Climate Change and Environmental Ethics Ved P. Nanda,2012-12-01 There is a broad consensus that climate change presents the international

community with a formidable challenge Yet progress on all fronts prevention mitigation and adaptation has been slow Ved P Nanda finds an explanation for this disparity in the sharp divide between the developed and developing countries Developing countries demand that major industrialized nations provide the necessary resources and technology to address climate change while many developed countries seek firm commitments and timetables on action from the developing countries The result is a stalemate Climate Change and Environmental Ethics contains first rate research and thinking from scholars from multiple disciplines ethics ecology philosophy economics political science history and international law What distinguishes this volume from recent work on climate change are two of its special features One is the multi disciplinary backgrounds of the scholars their stellar experiences and the wisdom with which they express not simply their philosophy and theory but also their suggestions for concrete specific action in practical terms The second is the special niche this volume fills in its overarching theme of the need for a renewed environmental ethic that can bring together these disparate but interconnected views This volume explores alternative ways of conceiving our relation to the natural world A spirit of international cooperation and collaboration is needed to meet the challenge The reader is compelled to think anew about our understanding of the scientific and technical issues as well as our values and ethical responsibilities regarding climate change

Hell and High Water Alistair McIntosh, 2012-07-30 The ecologist and author of *Soil Soul* makes a compelling and provocative argument for a new way of life in the face of climate change Climate change is the greatest challenge that the world has ever faced In this groundbreaking book Alastair McIntosh summarizes the science of what is happening to the planet using his home country of Scotland as a case study He then argues that the root of our climate crisis is not in our politics but in our consumerism an addictive mentality where wants have replaced needs and consumption drives our very identity In a fascinating journey through literature that speaks to climate change including the ancient Sumerian Epic of Gilgamesh Plato's myth of Atlantis and Shakespeare's *Macbeth* McIntosh reveals the psychohistory of modern consumerism He shows how we have fallen prey to a numbing culture of violence and the manipulation of marketing Only when we resist these vices and face reality will we discover the spiritual meaning of our troubled times Only then can magic new meaning and all that gives life start to mend a broken world What McIntosh does brilliantly here is offer an alternative deeply humanist version of green politics The Scotsman UK
