association of mitochondrial dysfunction epigenetic influences and neuroinflammation with synaptic plasticity in neurodegenerative diseases The following chapters review the dynamic changes that occur at the cellular and synaptic levels in Parkinson s disease Alzheimer s disease and Huntington s disease paving the way for innovative therapeutic strategies Furthermore the book presents various computational tools and methodologies essential for enhancing our understanding of synaptic plasticity It examines the transformative role of artificial intelligence tools in addressing synaptic impairment across various neurodegenerative diseases Discusses the role of synaptic plasticity in neurodegenerative diseases shedding light on how dynamic changes occur at the cellular and synaptic levels Explores the transformative role of artificial intelligence tools in addressing synaptic impairment across various neurodegenerative diseases Provides a comprehensive overview of neurodegenerative disorders including pathogenesis etiology and treatment strategies Presents tools and techniques used to simulate the complex system biology of synaptic plasticity Examines the role of computational neuroscience in understanding and potentially treating conditions such as multiple sclerosis and amyotrophic lateral sclerosis Toward the end the book explores the role of synaptic impairment and computational neuroscience in understanding and potentially treating conditions such as multiple sclerosis and amyotrophic lateral sclerosis With its multifaceted approach this book serves as a useful resource for researchers clinicians and students in the fields of neuroscience computational biology and neurology

The Brain-behavior Continuum Jose Luis Perez Velazquez, Marina Frantseva, 2011 This book is a comprehensive overview of the main current concepts in brain cognitive activities at the global collective or network level with a focus on transitions between normal neurophysiology and brain pathological states It provides a unique approach of linking molecular and cellular aspects of normal and pathological brain functioning with their corresponding network collective and dynamical manifestations that are subsequently extended to behavioural manifestations of healthy and diseased brains This book introduces a high level perspective searching for simplification amongst the structural and functional complexity of nervous systems by consideration of the distributed interactions that underlie the collective behaviour of the system The authors hope that this approach could promote a global comprehensive understanding of high level laws behind the elementary biological processes in the neuroscientific community while perhaps introducing elements of biological complexities to the mathematical computational readership The title of the book refers to the main point of the monograph that there is a smooth continuum between distinct brain activities resulting in different behaviours and that due to the plastic nature of the brain the behaviour can also alter the brain function thus rendering artificial the boundaries between the brain and its behaviour

Producing and Analyzing Macro-Connectomes: Current State and Challenges Mihail Bota, Sharon Crook, Marcus Kaiser, 2016-10-20 Construction of comprehensive and detailed brain regions neuroanatomical connections matrices macro connectomes is necessary to understand how the nervous system is organized and to elucidate how its different parts interact Macro connectomes also are the structural foundation of any finer granularity approaches at the neuron classes and types meso connectomes or individual neuron micro connectomes levels The advent of novel neuroanatomical methods as well as combinations of classic techniques form the basis of several large scale projects with the ultimate goal of producing publicly available connectomes at different levels A parallel approach that of systematic and comprehensive collation of connectivity data from the published literature and from publicly accessible neuroinformatics platforms has produced macro connectomes of different parts of the central nervous system CNS in several mammalian species The emergence of these public platforms that allow for the manipulation of rich connectivity data sets and enable the construction of CNS macro connectomes in different species may have significant and long lasting implications Moreover when these efforts are leveraged by novel statistical methods they may influence our way of thinking about the brain Hence the present brain region centric paradigm may be challenged by a network centric one Ultimately these projects will provide the information and knowledge for understanding how different neuronal parts communicate and function developing novel approaches to diseases and disorders and facilitating translational efforts in neurosciences With this Research Topic we bring together the current state of macro connectome related projects including the large scale production of thousands of publicly available neuronatomical experiments databases with tens of thousands of connectivity records collated from the published literature and the newest methods for displaying and analyzing this information This topic also includes a wide range of challenges and how they are addressed from platforms designed to integrate connectivity data across different sources species and CNS levels of organization to languages specifically designed to use these data in models at different scales of resolution to efforts of 3D reconstruction and data integration and to approaches for extraction and representation of this knowledge Finally we address the present state of different efforts of meso connectomes construction and of computational modeling in the context of the information provided by macro connectomes
