Appropriateness Method User's Manual Kathryn Fitch,Steven J. Bernstein,Maria Delores Aguilar,Mary S. Aguilar,Bernard
Burnand,Pablo Lazaro,Juan Ramon LaCalle,2001 Health systems should function in such a way that the amount of
inappropriate care is minimized while at the same time stinting as little as possible on appropriate and necessary care The
ability to determine and identify which care is overused and which is underused is essential to this functioning To this end
the RAND UCLA Appropriateness Method was developed in the 1980s It has been further developed and refined in North
America and increasingly in Europe The rationale behind the method is that randomized clinical trials the gold standard for
evidence based medicine are generally either not available or cannot provide evidence at a level of detail sufficient to apply
to the wide range of patients seen in everyday clinical practice Although robust scientific evidence about the benefits of many
procedures is lacking physicians must nonetheless make decisions every day about when to use them Consequently a method
was developed that combined the best available scientific evidence with the collective judgment of experts to yield a
statement regarding the appropriateness of performing a procedure at the level of patient specific symptoms medical history
and test results This manual presents step by step guidelines for conceptualising designing and carrying out a study of the
appropriateness of medical or surgical procedures for either diagnosis or treatment using the RAND UCLA Appropriateness
Method The manual distills the experience of many researchers in North America and Europe and presents current as of the
year 2000 thinking on the subject Although the manual is self contained and complete the authors do not recommend that
those unfamiliar with the RAND UCLA Appropriateness Method independently conduct an appropriateness study instead
they suggest seeing one before doing one To this end contact information is provided to assist potential users of the method
