Non-canonical Cyclic Nucleotides Roland Seifert,2017-04-28 The cyclic purine nucleotides 3'5' cAMP and 3'5' cGMP are well established second

messengers cGMP has recently been covered in a volume of the Handbook of Experimental Pharmacology volume 191 In addition to 3'5' cAMP and 3'5' cGMP so called non canonical cyclic nucleotides exist These comprise the cyclic pyrimidine nucleotides 3'5' cCMP and 3'5' cUMP the purine nucleotide 3'5' cIMP the 2'3' nucleoside monophosphates and cyclic dinucleotides In this volume of the Handbook of Pharmacology word leading experts in the field summarize our current knowledge on these non canonical cyclic nucleotides discuss open questions future research directions and the pharmacotherapeutic implications Special emphasis will be given to the emerging roles of 3'5' cCMP and 3'5' cUMP as second messengers with regard to generators effectors biological functions inactivation and bacterial toxins The role of 3'5' cIMP as potential second messenger will also be critically discussed Furthermore we will consider transport of cyclic nucleotides and their potential role as first messengers The role of the cyclic dinucleotide cGAMP in the immune system will be covered too Lastly the book will present important methodological aspects ranging from mass spectrometric methods for cyclic nucleotide detection to the synthesis of nucleotide analogs as experimental tools and holistic methods for analysis of cyclic nucleotide effects

Cyclic Nucleotides P. D. Kebejian, M. D. Nathanson, 2012-12-06 Cyclic nucleotides are intimately involved in the consequences of either stimulation or blockade of receptors therefore an understanding of the biochemistry of cyclic nucleotides ought to be important for pharmacologists Pharmacology is a science that among other things investigates chemical compounds that affect the physiology of cells tissues and organs Frequently pharmacologists account for the effect of low concentrations of a drug upon a tissue by invoking the presence of a receptor upon the surface of the cell Traditional pharmacologists excelled at identifying and classifying the properties of receptors A J CLARK S monograph in the earlier series of the Handbook of Experimental Pharmacology CLARK 1937 summarized the mathematics underlying the traditional pharmacological approach towards receptors By its nature however classic pharmacology provided little useful information about the intracellular events occurring as a consequence of occupying a receptor for example ALQUIST 1948 identified the beta adrenoceptor but he did not provide any insight into how stimulation of the receptor produces tissue specific physiological responses The discovery of cyclic AMP by RALL and SUTHERLAND see RALL Vol I led to biochemical investigations of many different receptors including ALQUIST S beta adrenoceptor that share a cyclic nucleotide as a common factor in the biochemical mechanisms that translate the occupancy of receptors into physiological effects Ten years ago in the introduction to their monograph on cyclic nucleotides ROBISON et al 1971 commented on the rapid growth of interest in cyclic nucleotides over the preceding years

Handbook of Experimental Pharmacology Hermann Blaschko, Erich Muscholl, 1972

Principles and Practice of Gynecologic Oncology Richard R. Barakat, Maurie Markman, Marcus Randall, 2009 Providing comprehensive coverage of the biology of gynecologic cancer the therapeutic modalities available and the diagnosis and treatment of site specific malignancies this edition has 30 percent new contributing authors and new material A companion Web site offers a fully searchable text
