qualified them to address such problems as unifying the British provinces into one nation managing the industrial workplace and accommodating religious plurality *Casebook of Clinical Neuropsychology* Joel E. Morgan, Ida Sue Baron, Joseph H. Ricker, 2010-10-29 *Casebook of Clinical Neuropsychology* features actual clinical cases drawn from leading experts in the field *C. Miller Fisher* Louis R. ocular tumor that left him unable to perceive depth As always he embeds these case histories in a rich historical and scientific context Sacks goes beyond basic vision to explore perception hallucination and the power of visualization as well as the ocular effects of migraine epilepsy and other conditions Oliver Sacks is our perfect guide to the visual world a realm that it turns out is much much more complicated than we could have imagined **Breaking the Silence** Stephen P.

Making up the Mind Chris Frith, 2013-05-20 Written by one of the world's leading neuroscientists, *Making Up the Mind* is the first accessible account of experimental studies showing how the brain creates our mental world. Uses evidence from brain imaging, psychological experiments, and studies of patients to explore the relationship between the mind and the brain. Demonstrates that our knowledge of both the mental and physical comes to us through models created by our brain. Shows how the brain makes communication of ideas from one mind to another possible.

Judd,2012-12-06 The first time I walked onto a neurology ward during my graduate training I was shocked much as family members of people with brain illnesses probably are I had learned a great deal in class about aphasia amnesia agnosia apraxia and other cognitive disorders but I had not been prepared for the behavioral disorders I was to encounter for the severe physical disabilities for the indignities of the patient role Bit by bit I overcame this shock I learned to look people in the eye who seemed to have more tubes than the New York subway system people whose faces had been scraped off the pavement and who were drooling incontinent and severely dysarthric I learned to see beyond what frightened and repulsed me to the human beings within I wish I could say that I saw in each person a deep human soul yearning to breathe free and to love an essence an intrinsic goodness a wholeness I did not Rather it seems like each and every unique element of human behavior one s abilities and one s desires can be destroyed by some brain lesion while leaving a uniquely human person behind Not only are there losses but behaviors emerge at times that are not seen in people with intact brains but which still reveal a human attempting to cope I do feel that I saw and still see in each such person something intrinsically human but not the same thing in each

Clinical and Neuropsychological Aspects of Closed Head Injury John T. E.

Musicophilia Oliver Sacks,2010-02-05 What goes on in human beings when they make or listen to music

What is it about music what gives it such peculiar power over us power delectable and beneficent for the most part but also capable of uncontrollable and sometimes destructive force Music has no concepts it lacks images it has no power of representation it has no relation to the world And yet it is evident in all of us we tap our feet we keep time hum sing conduct music mirror the melodic contours and feelings of what we hear in our movements and expressions In this book Oliver Sacks explores the power music wields over us a power that sometimes we control and at other times don t He explores in his inimitable fashion how it can provide access to otherwise unreachable emotional states how it can revivify neurological avenues that have been frozen evoke memories of earlier lost events or states or bring those with neurological disorders back to a time when the world was much richer This is a book that explores like no other the myriad dimensions of our experience of and with music
