Lakhani,2016-03-04 A comprehensive and multidisciplinary view of the emerging paradigm of user and open innovation offering both theoretical and empirical perspectives The last two decades have witnessed an extraordinary growth of new models of managing and

organizing the innovation process that emphasizes users over producers Large parts of the knowledge economy now routinely rely on users communities and open innovation approaches to solve important technological and organizational problems This view of innovation pioneered by the economist Eric von Hippel counters the dominant paradigm which cast the profit seeking incentives of firms as the main driver of technical change In a series of influential writings von Hippel and colleagues found empirical evidence that flatly contradicted the producer centered model of innovation Since then the study of user driven innovation has continued and expanded with further empirical exploration of a distributed model of innovation that includes communities and platforms in a variety of contexts and with the development of theory to explain the economic underpinnings of this still emerging paradigm This volume provides a comprehensive and multidisciplinary view of the field of user and open innovation reflecting advances in the field over the last several decades The contributors including many colleagues of Eric von Hippel offer both theoretical and empirical perspectives from such diverse fields as economics the history of science and technology law management and policy The empirical contexts for their studies range from household goods to financial services After discussing the fundamentals of user innovation the contributors cover communities and innovation legal aspects of user and community innovation new roles for user innovators user interactions with firms and user innovation in practice describing experiments toolkits and crowdsourcing and crowdfunding Contributors Efe Aksuyek Yochai Benkler James Bessen J r n H Block Annika Bock Helena Canh o Jeroen P J de Jong Emmanuelle Fauchart Dominique Foray Nikolaus Franke Johann F ller Helena Garriga Fred Gault Fredrik Hacklin Dietmar Harhoff Joachim Henkel Cornelius Herstatt Christoph Hiennerth Venkat Kuppuswamy Karim R Lakhani Christopher Lettl Christian L thje Ethan Mollick Hidehiko Nishikawa Alessandro Nuvolari Susumu Ogawa Pedro Oliveira Stefan Perkmann Berger Frank Piller Christina Raasch Susanne Roiser Fabrizio Salvador Pamela Samuelson Tim Schweisfurth Sonali K Shah Christoph Stockstrom Katherine J Strandburg Stefan Thomke Andrew W Torrance Mary Tripsas Georg von Krogh

Essentials of 3D Biofabrication and Translation Anthony Atala, James J Yoo, 2015-07-17 *Essentials of 3D Biofabrication and Translation* discusses the techniques that are making bioprinting a viable alternative in regenerative medicine. The book runs the gamut of topics related to the subject including hydrogels and polymers, nanotechnology, toxicity testing, and drug screening platforms, also introducing current applications in the cardiac, skeletal, and nervous systems and organ construction. Leaders in clinical medicine and translational science provide a global perspective of the transformative nature of this field, including the use of cells, biomaterials, and macromolecules to create basic building blocks of tissues and organs, all of which are driving the field of biofabrication to transform regenerative medicine. Provides a new and versatile method to fabricating living tissue. Discusses future applications for 3D bioprinting technologies including use in the cardiac, skeletal, and nervous systems and organ construction. Describes current approaches and future challenges for translational science. Runs the gamut of topics related to the subject from hydrogels and polymers to nanotechnology, toxicity testing, and drug screening platforms.

Innovation in Developing Countries Nobuaki Matsunaga, 2019-02-06 The main focus of this book is innovation for developing countries: what is the innovation for? what are the current conditions of the innovation and how to effectively innovate in developing economies? It contains the latest insights and analyses of innovation based on intensive interviews as well as primary and secondary data of manufacturing firms in developing countries: Vietnam and Laos in particular. Innovation requires something new. Integration of deep understanding of innovation and econometric analyses are a new combination in this book which contrasts with other similar books in the field. This new approach may benefit policy makers as well as scholars and firms in poor countries. The main points of the book are summarized as follows: First, for most poor countries, learning innovation is considered the key to economic growth rather than leading edge innovation, which is a more popular theme in similar books on innovation. Second, an overwhelming majority of innovations currently used in poor countries are developed in advanced countries, so technology transfer and learning from the latter are a fundamental source of innovation in the former. Third, a surprisingly high rate of firms around 50% reported that they introduced new or significantly improved products or processes in poor countries, and this high innovation rate is a great benefit to be enhanced by government policies. Fourth, the common factors driving innovation of manufacturing firms in Vietnam and Laos are 1. human capital, 2. social capital, and 3. innovation in the past. Fifth, the impact of innovation on firm performance is found to be mixed in these countries. Sixth, so far, almost all studies on innovation have focused on product or process innovation, but additional light is shed here on organizational innovation.
