Innovation and Market Value. The Case of Tourism Enterprises Dawid Szutowski,2017-03-18 In contemporary economics only one thing is constant constant change Gunday et al 2011 The notion of change relates directly to innovation The very nature of innovation constitutes combining existing factors in a new changed way Since the early stage of the scientific investigation of innovation research has focused mainly on the solutions actually implemented Schumpeter 1939 Yet it is only through implementation that the benefits of innovation may materialise The task is not simple The process of obtaining the gains is complex as innovation may pass through different stages Thus for almost half century the scientific community has considered innovation to be a

complex process and not just a simple occurrence Myers and Marquis 1969 Innovation pushes progress forward Thus previous scientific investigation limited the concept of innovation to implementations which generate positive effects Nelson and Winter 1982 The above scientific considerations still hold today Moss Kanter 2006 Innovation is of crucial importance for tourism companies which cover accommodation for visitors food and beverage serving activities passenger transportation travel agencies and other reservation activities cultural activities sports and recreational activities and retail trade of country specific tourism characteristic goods UNWTO 2010 It provides them with competitive advantage and hence the firms with market power gain more from innovation Tirole 1995 A firm s innovation interacts with the environment It delivers diverse benefits to the consumers in the form of new products and lower prices which in turn impact positively on the company Shiller 2006 In the context of tourism the ongoing scientific discussion on innovation seems not to have achieved any definite conclusions yet The implementation of innovation in tourism enterprises leads to the achievement of diverse ends From this point of view the measurement of the effects of innovation is of vital importance There are a number of financial measures covering substantially different fields The most comprehensive amongst them is a company s value It covers all the aspects of a company s activity Bodie and Merton 2000 However due to its importance and complexity numerous approaches to company value were created The basic distinction covers book and market value based approaches The proponents of book value assume that the balance sheet yields a reliable estimate of the value of assets and equities However numerous shortcomings emerge the static character dealing with historical figures failing to include intangibles and treating all classes of accounts as having equal importance Nunes 2003 The market value based approach stands for the price that assets would fetch in the marketplace Fabrozi and Drake 2009 The main objective of the research is to measure the short and long term impact of innovation announcements on the market value of equity of tourism enterprises Valuing Data Dewey E.

Ray,2018-05-25 The past decade has seen a dramatic increase in the amount and variety of information that is generated and stored electronically by business enterprises Storing this increased volume of information has not been a problem to date but as these information stores grow larger and larger multiple challenges arise for senior management namely questions such as How much is our data worth Are we storing our data in the most cost effective way Are we managing our data effectively and efficiently Do we know which data is most important Are we extracting business insight from the right data Are our data adding to the value of our business Are our data a liability What is the potential for monetizing our data and Do we have an appropriate risk management plan in place to protect our data To answer these value based questions data must be treated with the same rigor and discipline as other tangible and intangible assets In other words corporate data should be treated as a potential asset and should have its own asset valuation methodology that is accepted by the business community the accounting and valuation community and other important stakeholder groups Valuing Data An Open Framework is a first step in that direction Its purpose is to Provide the reader with some background on the nature of data Present the common

categories of business data Explain the importance of data management Report the current thinking on data valuation Offer some business reasons to value data Present an open framework along with some proposed methods for valuing data The book does not aim to prescribe exactly how data should be valued monetarily but rather it is a starting point for a discussion of data valuation with the objective of developing a stakeholder consensus which in turn will become accepted standards and practices
