**The Four Elements of Architecture and Other Writings** Gottfried Semper, 1989-03-31 Originally published in 1989 this book provides an English translation of a number of Gottfried Semper's published writings Frame and Generic Space Bernard Leupen, 2006 The average lifespan of a house is somewhere around 100 years During that time it will see many mutations in household composition and related spatial rituals Designers are therefore faced with the task of giving form to something that is constantly subject to change Many studies into flexibility focus on the changeable on movable partitions and variation in the internal layout The present study takes not the changeable but the permanent as its departure point The permanent i.e. the more durable component of the house or building constitutes the frame within which change can take place while the frame defines the generic space the space in which change can occur **Campsite** Charlie Hailey, 2008-06-01 Camping is perhaps the quintessential American activity We camp to escape to retreat to find ourselves The camp serves as a home away from home where we might rethink a deliberate life We also camp to find a new collective space where family and society converge Many of us attended summer camps and the legacies of these childhood havens form part of American culture In Campsite Charlie Hailey provides a highly original and artfully composed interpretation of the cultural significance and inherently paradoxical nature of camps and camping in contemporary American society Offering a new understanding of the complex relationship between place time and architecture in an increasingly mobile culture Hailey explores campsites as places that necessitate a unique combination of contrasting qualities such as locality and foreignness mobility and fixity temporality and permanence and public domesticity Camping methods reflect the rigid flexibility of the process leaving home arriving at a site clearing an area making and then finally breaking camp The phases of this sequence are both separate and indistinct To understand this paradox Hailey emphasizes the role of process He constructs a philosophical framework to elucidate the placefulness or sense of place of such temporary constructions and provides alternative understandings of how we think of the home and of public versus private dwelling spaces Historically camps have been used as places for scouting out future towns for clearing provisional spaces and for making semipermanent homes away from home To understand how cultures of camping develop and accommodate this dynamic mix of permanence and flexibility Hailey looks at three basic qualities of the camp as a site for place making as a populist precursor for modern built environments and as a method Hailey's creative and philosophical approach to camps and camping allows him to construct links between such diverse projects as the philosophers camps of the mid nineteenth century the idiosyncratic camping clubs that arose with the automobile culture in the early 1920s and more recent uses of campsites as temporary housing for those displaced by Hurricane Katrina In Campsite Hailey makes a singular and significant contribution to current studies of place and vernacular architecture while also reconfiguring methods of research in cultural studies architectural theory and geography **Material Theories** Elena Chestnova, 2022-06-19 Material Theories takes a radically new approach

to well established thinking on nineteenth century architecture and design by investigating Gottfried Semper's classic ideas about dressing metamorphosis of material and cultural development culminating in his two volume publication *Style*. This book demonstrates how Semper's theories crystallised among his encounters with material things of the late 1840s and early 1850s. It examines several discursive frameworks and phenomena which shaped the attitude to artefacts in Europe in the mid nineteenth century and which were specifically pertinent to Semper's evolution: archaeology and antiquarianism, the domestic interior, print media collections and the embodied relationship between the designer and their work. For the first time this book examines the construction of a design theory not only as an intellectual endeavour but also as a process of confrontation with material things. It employs recent approaches to material culture in particular Thing Theory in order to show that Semper's artefact references constituted his ideas rather than simply giving impetus to them. It will be an important investigation for academics and researchers interested in interior design history as well as scholars of material culture and history of design theory.

**Building Theories** Franca Trubiano, 2022-11-25 *Building Theories* speaks to the value of words in architecture. It addresses the author's fascination with the voices of architects, engineers, builders and craftspeople whose ideas about building have been captured in text. It discusses the content of treatises, essays, articles and letters by those who have been throughout history committed to the art of building. In this *Building Theories* argues for the return of a practice of architectural theory that is set amongst building, buildings and builders. This journey of close reading reinterprets the words of Vitruvius, Alberti, de L'Orme, Le Camus de Mézières, Boullée, Laugier, Rondelet, Semper, Viollet le Duc, Hebsch, Brtticher, Berlage, Muthesius, Wagner, Behrendt, Gropius and Arup. With chapters dedicated to texts from antiquity, the Renaissance and the nineteenth century and with a critical eye on architectural theory popularized in the Anglo-Saxon world post 1968, readers are introduced to a wider, more inclusive definition of architectural ideas. *Building Theories* considers how contemporary scholarship has steered away from the topic of building in its reluctance to admit that both design and construction are central to its concerns. In response, it argues for a realignment of architecture with the concept of *techné* with a dual commitment to *fabrica* and *ratio* with a productive return to *l'art de bien bâtir* with the accurate translation of the term *Baukunst* and with an appeal to the architect's composite mind. Students, practitioners and educators will identify in *Building Theories* ways of thinking that strive for the integration of design with construction, reject the supposed primacy of the former over the latter, recognize how aesthetics are an insufficient scaffold for subtending the subject of architectural ethics and accept without reservation that material transformations have always been at the origins of built form.

**Art in Theory** Paul Wood, Leon Wainwright, Charles Harrison, 2020-12-11 A ground breaking new anthology in the *Art in Theory* series offering an examination of the changing relationships between the West and the wider world in the field of art and material culture. *Art in Theory: The West in the World* is a ground breaking anthology that comprehensively examines the relationship of Western art to the art and material culture of the wider world. Editors Paul Wood and Leon Wainwright have included 370

texts some of which appear in English for the first time The anthologized texts are presented in eight chronological parts which are then subdivided into key themes appropriate to each historical era The majority of the texts are representations of changing ideas about the cultures of the world by European artists and intellectuals but increasingly as the modern period develops and especially as colonialism is challenged a variety of dissenting voices begin to claim their space and a counter narrative to western hegemony develops Over half the book is devoted to 20th and 21st century materials though the book's unique selling point is the way it relates the modern globalization of art to much longer cultural histories As well as the anthologized material *Art in Theory The West in the World* contains A general introduction discussing the scope of the collection Introductory essays to each of the eight parts outlining the main themes in their historical contexts Individual introductions to each text explaining how they relate to the wider theoretical and political currents of their time Intended for a wide audience the book is essential reading for students on courses in art and art history It will also be useful to specialists in the field of art history and readers with a general interest in the culture and politics of the modern world

**Architectural Aesthetics** Edward Winters, 2023-05-18 The fine arts are traditionally seen to have intrinsic value that is they are valuable in themselves But this poses a problem for architecture its works are designed to serve our purposes and therefore it is classed as functional Carving out a new space Edward Winters argues why architecture is a fine art and finds a place for the fine art of architecture in the cultural environment in which we structure our lives Winters reconciles intrinsic value as a fine art with extrinsic value as shelter security and comfort without collapsing into the modernist conception of Functionalism He draws on the Apollonian and the Dionysian to resolve the apparent conflict between the two values the former requiring contemplative detached reflection the latter an engaged embodied entanglement with the festive mood inspired by the immediate situation Architecture Winters claims is to be regarded as functional but this functionality is subsumed under the intrinsic aesthetic value of living well Introducing the main positions in the philosophy of architecture through the lens of the timeless argument about what constitutes art Winters lays out a humanistic view of the medium and extends our understanding of aesthetics and the everyday

**Character** Charles L. Davis II, 2019-09-06 In the nineteenth century paradigm of architectural organicism the notion that buildings possessed character provided architects with a lens for relating the buildings they designed to the populations they served Advances in scientific race theory enabled designers to think of race and style as manifestations of natural law just as biological processes seemed to inherently regulate the racial characters that made humans a perfect fit for their geographical contexts architectural characters became a rational product of design Parallels between racial and architectural characters provided a rationalist model of design that fashioned some of the most influential national building styles of the past from the pioneering concepts of French structural rationalism and German tectonic theory to the nationalist associations of the Chicago Style the Prairie Style and the International Style In *Building Character* Charles Davis traces the racial charge of the architectural writings of five modern theorists Eugene Emmanuel Viollet le Duc Gottfried Semper Louis Sullivan Frank Lloyd Wright and William Lescaze to highlight the social political and historical significance of the spatial structural and ornamental elements of modern architectural styles *The City in Geography* Benedict Anderson, 2019-03-15 Monumental in scale and epic in development cities have become the most visible and significant symbol of human progress The geography on and around which they are constructed however has come to be viewed merely in terms of its resources and is often laid to waste once its assets have been stripped *The City in Geography* is an urban exploration through this phenomenon from settlement to city through physical geography which reveals an incremental progression of removing terrain topography and geography from the built environment ushering in and advancing global destruction and instability This book explains how the fall of geography in relationship to human survival has come through the loss of contact between urban dwellers and physical terrain and details the radical rethinking required to remedy the separations between the city its inhabitants and the landscape upon which it was built
